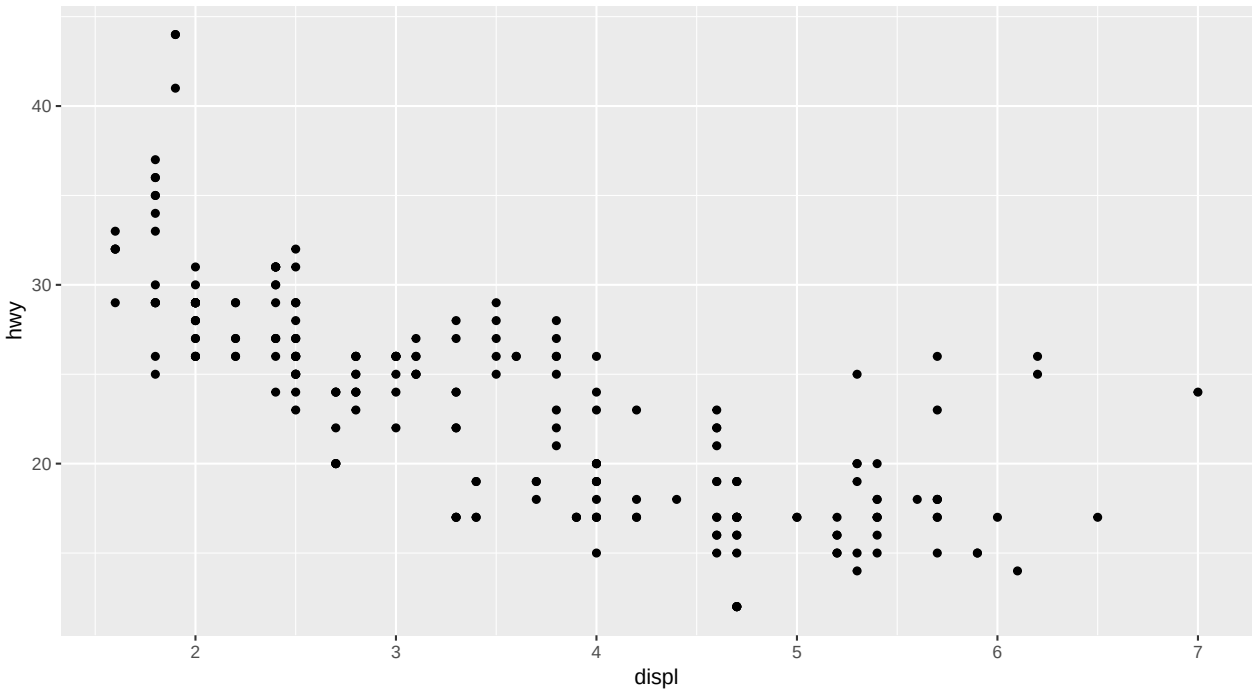
## # ... with 224 more rows
```

```
attach(mpg)
```

```
# ggplot2 TEMPLATE
ggplot(data = <DATA>) +
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

```
# Add data points
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy))
```



Exercises-1

```
# Question-1
ggplot(data = mpg)
```

```
# Question-2
nrow(mpg) # Rows
```

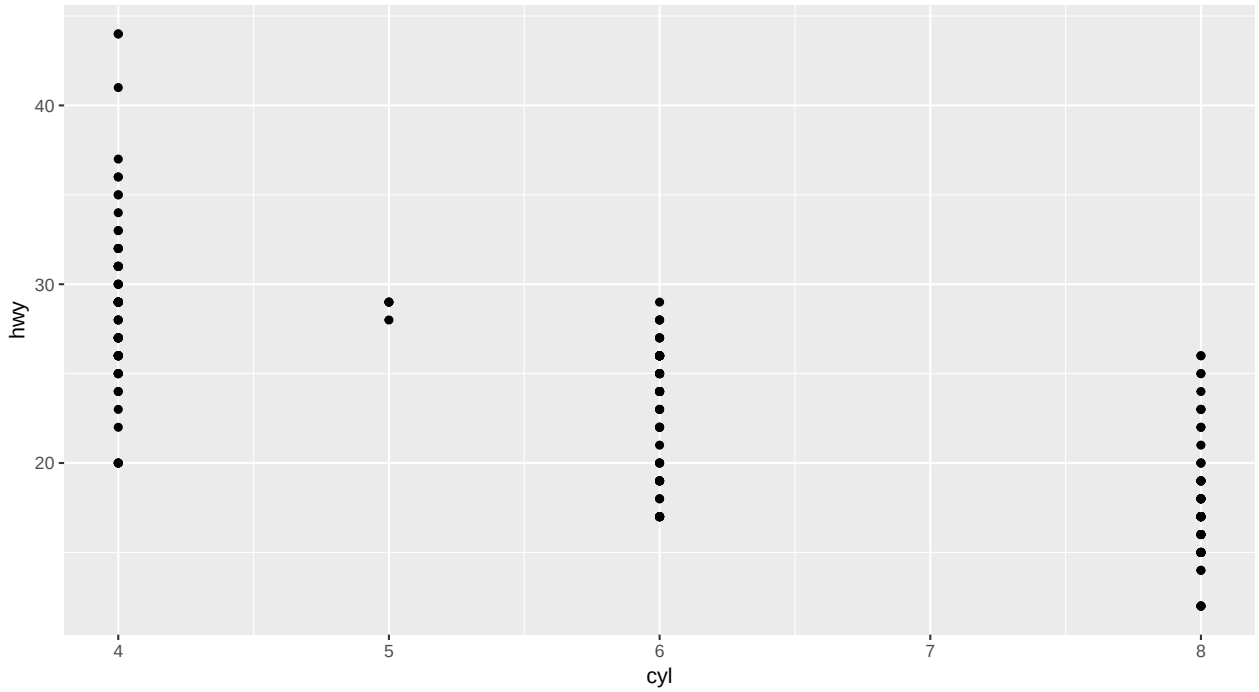
```
## [1] 234
```

```r
ncol(mpg) # Columns
```

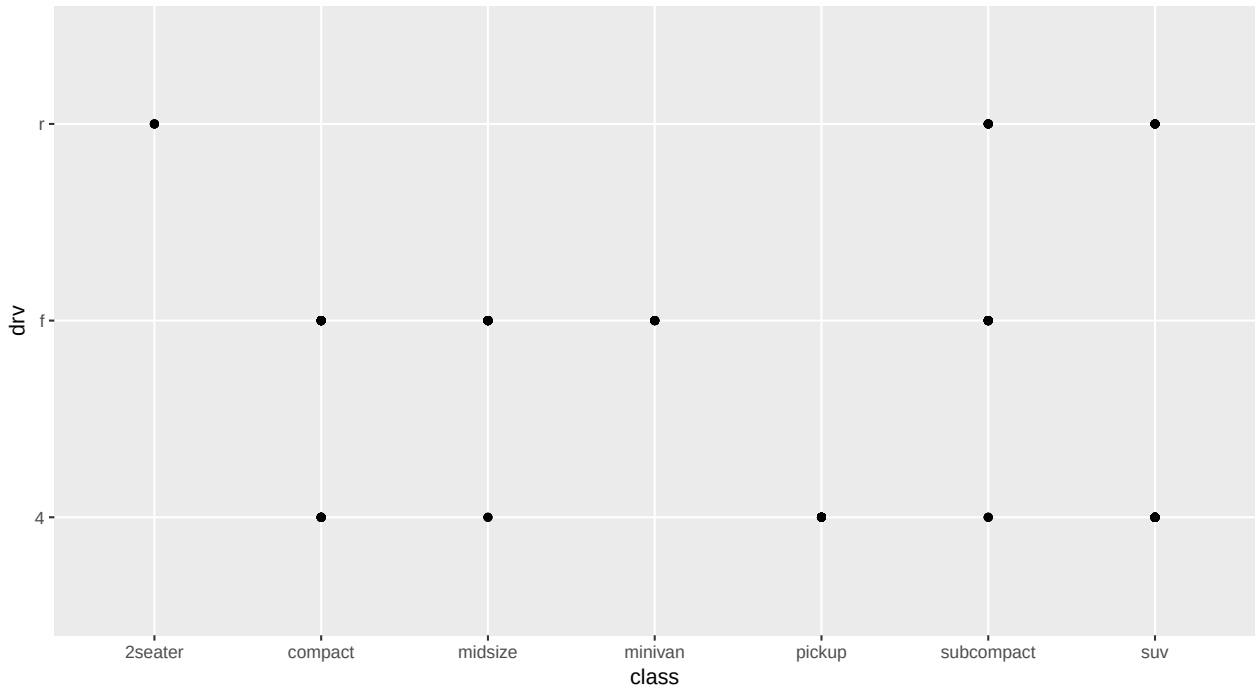
```
## [1] 11
```

```r
# Question-3
?mpg
# Answer: f = front-wheel drive, r = rear wheel drive, 4 = 4wd
```

```r
# Question-4
ggplot(data = mpg) + geom_point(mapping = aes(x = cyl, y = hwy))
```

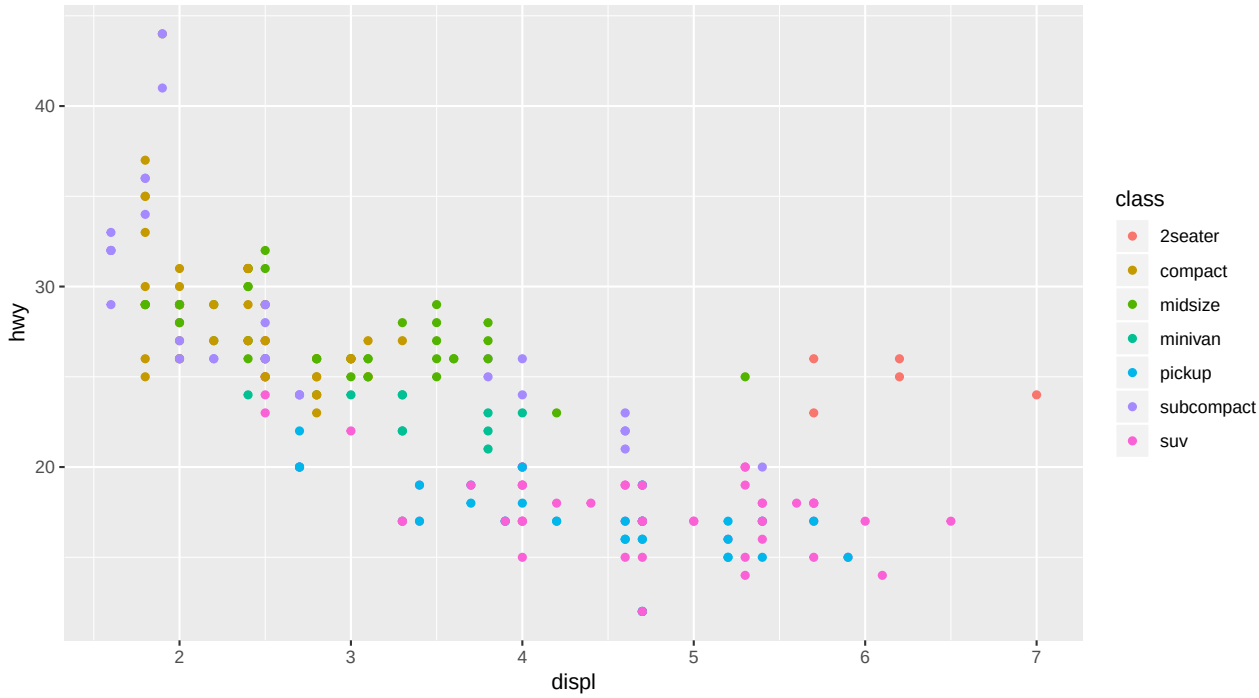


```r
# Question-5
ggplot(data = mpg) + geom_point(mapping = aes(x = class, y = drv))
```



Aesthetic Mappings

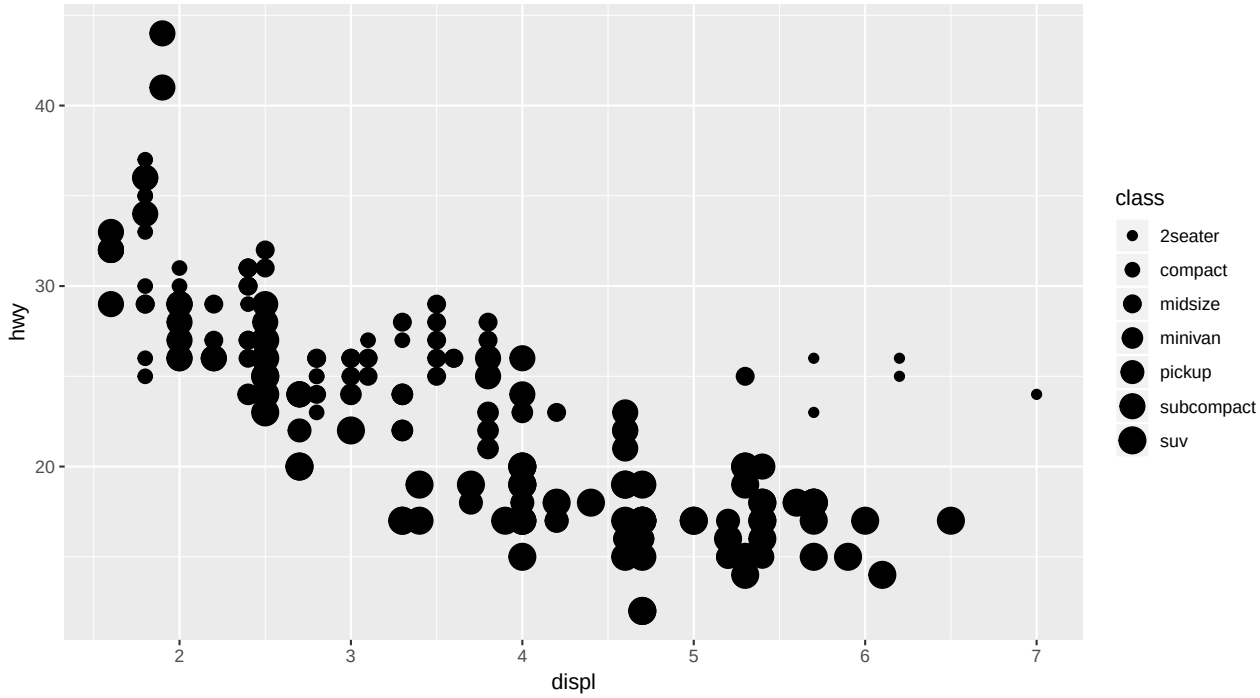
```
# Adding aesthetic to the plot (color/size/shape could be used here)
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              color = class))
```



```
# Using size as aesthetic instead of color
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
```

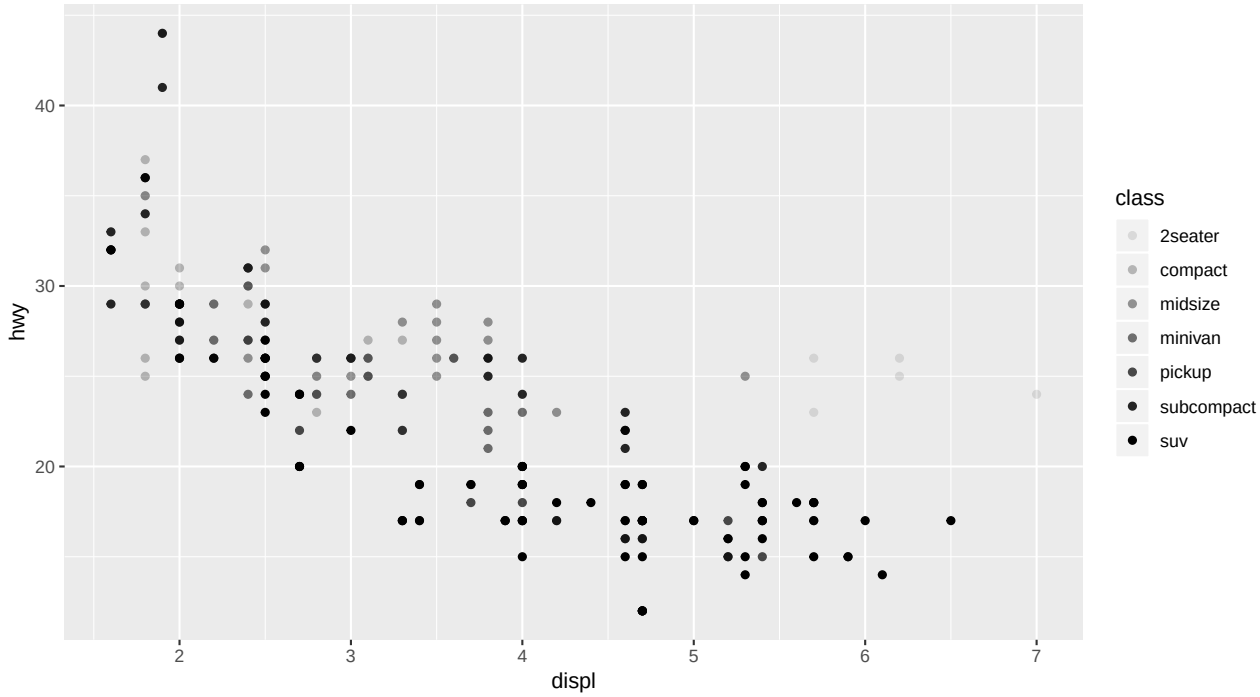
```
                                                size = class))
```

```
## Warning: Using size for a discrete variable is not advised.
```



```
# Alpha and Shape Aesthetics
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              alpha = class))
```

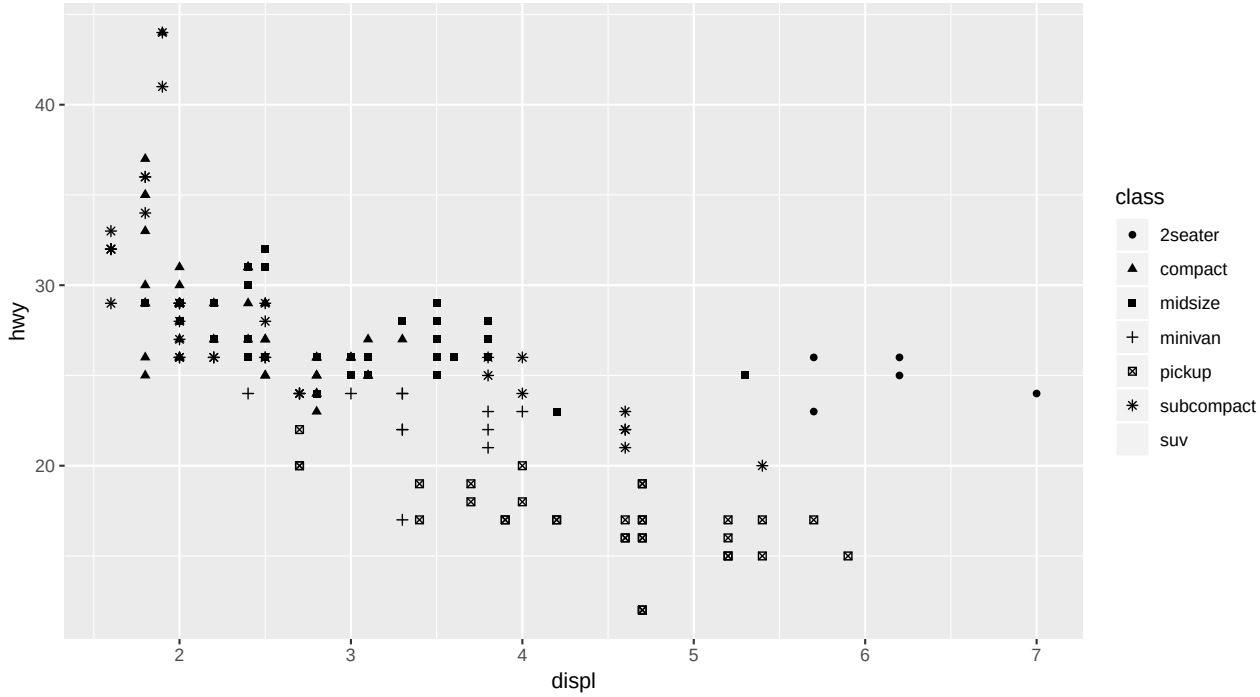
```
## Warning: Using alpha for a discrete variable is not advised.
```



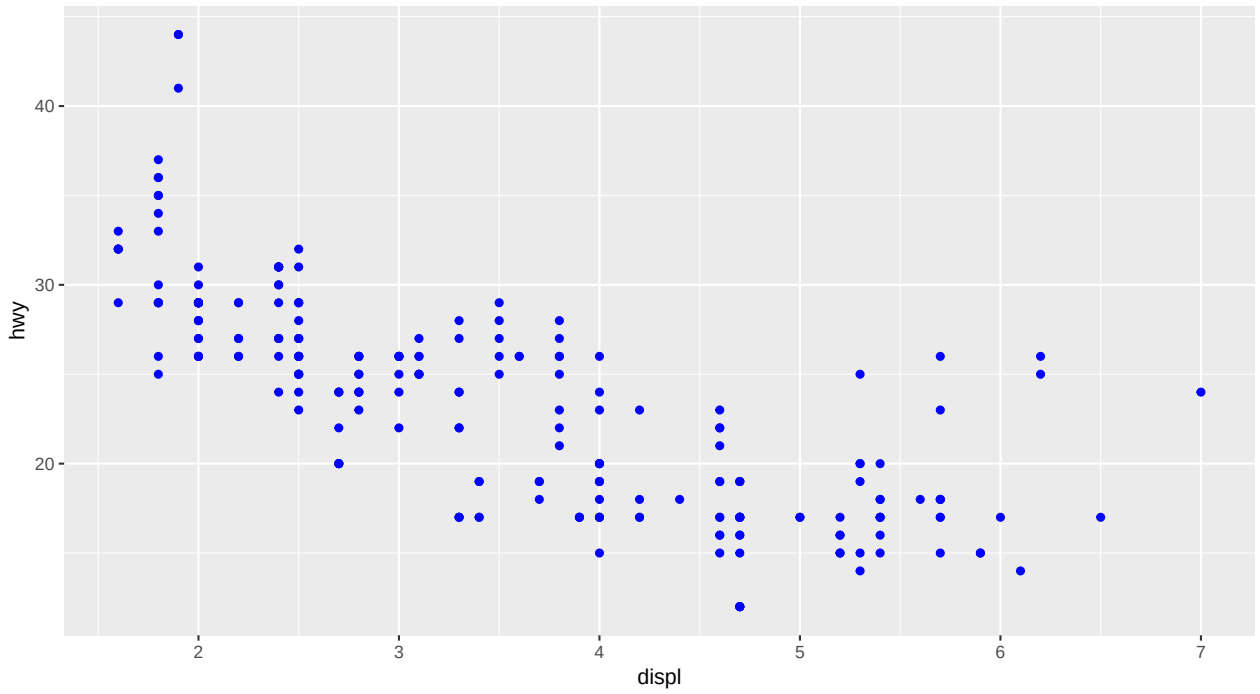
```
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              shape = class))
```

```
## Warning: The shape palette can deal with a maximum of 6 discrete values
## because more than 6 becomes difficult to discriminate; you have 7.
## Consider specifying shapes manually if you must have them.
```

```
## Warning: Removed 62 rows containing missing values (geom_point).
```



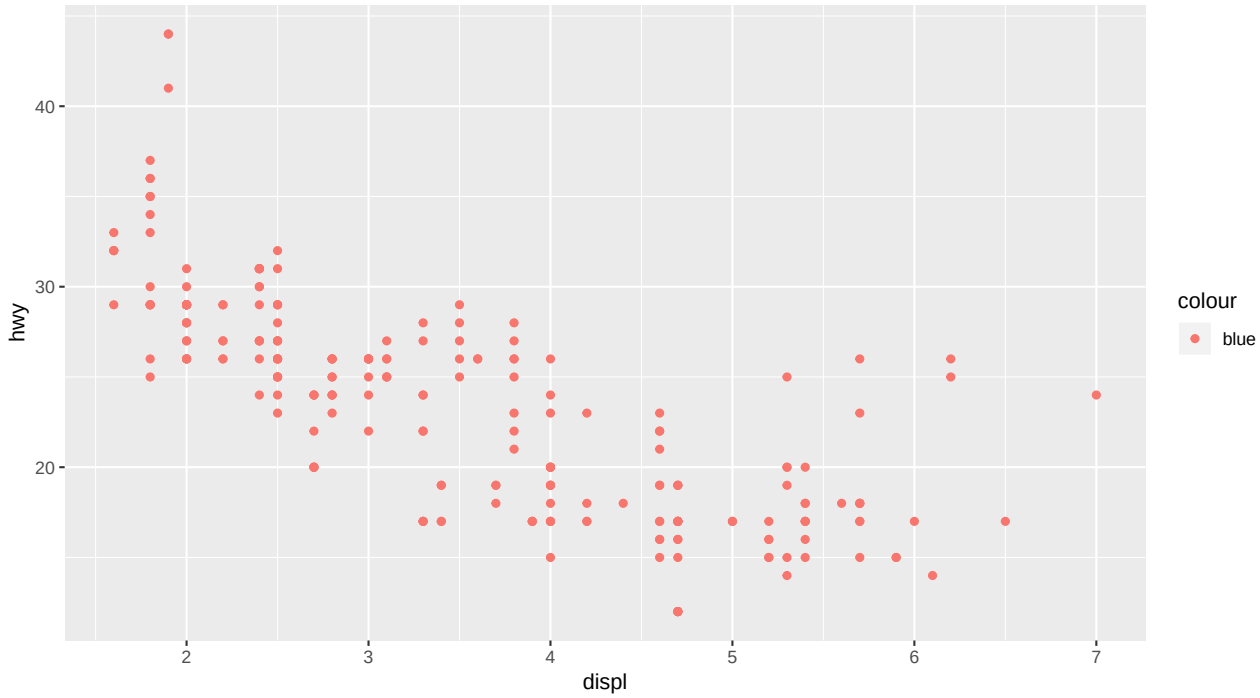
```
# Using a different color for the data points
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy),
                                              color = "blue")
```



Exercises-2

Q1. What's gone wrong with this code? Why are the points not blue?

```
# color should be outside aes()
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy, color = "blue"))
```



Q2. Which variables in mpg are categorical? Which variables are continuous? (Hint: type ?mpg to read the

documentation for the dataset). How can you see this information when you run mpg?

```
summary(mpg)
```

```
##  manufacturer          model               displ            year

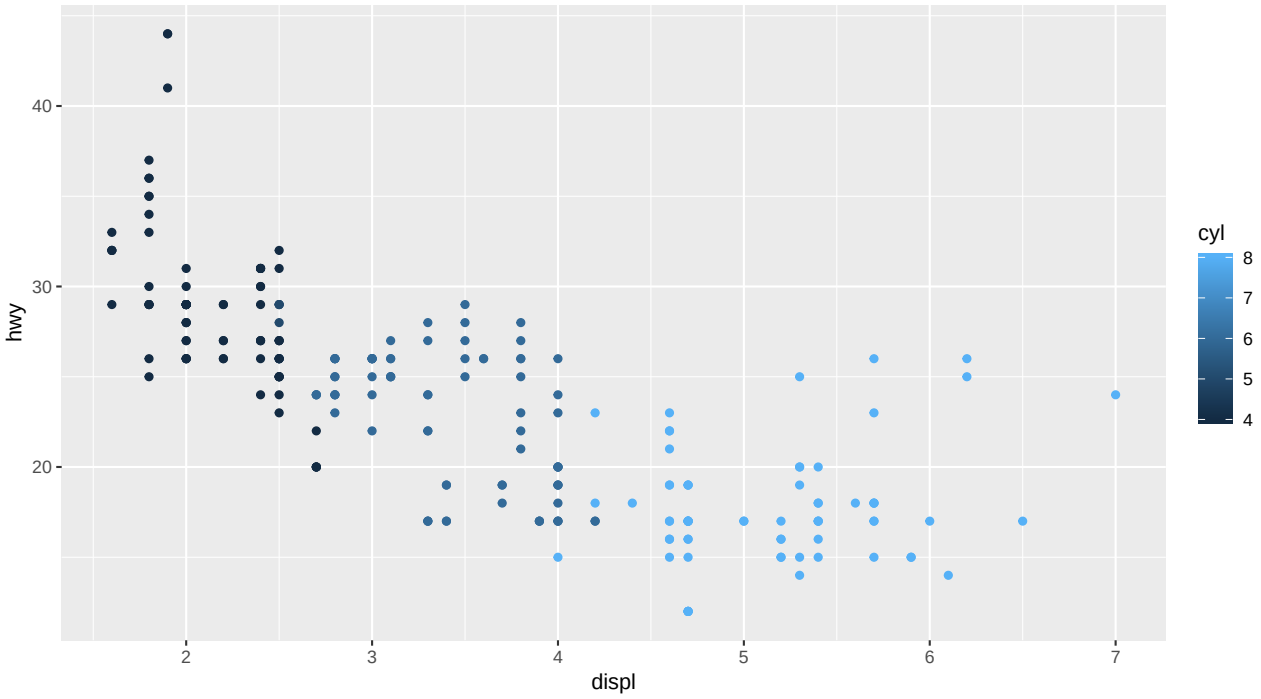
##  3rd Qu.:27.00
##  Max.   :44.00
```

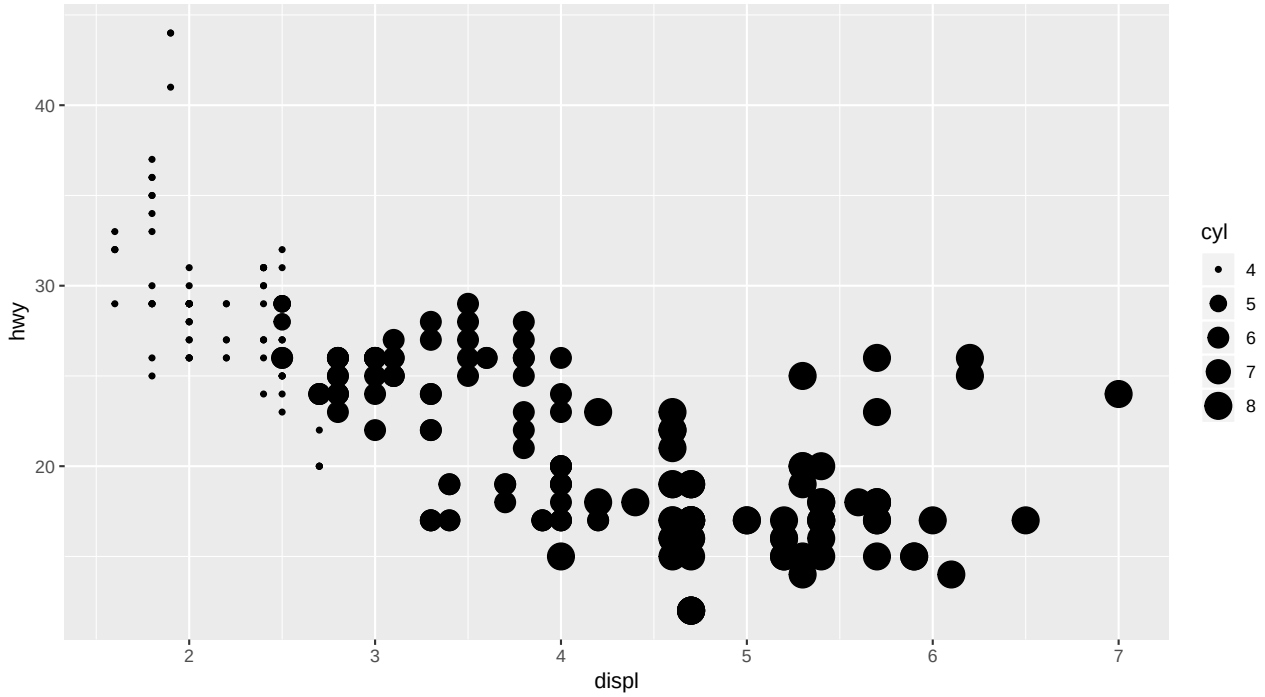
Q3. Map a continuous variable to color, size, and shape. How do these aesthetics behave differently for categorical vs. continuous variables?

```
# Mapping a continuos variable to color
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              color = cyl))
```



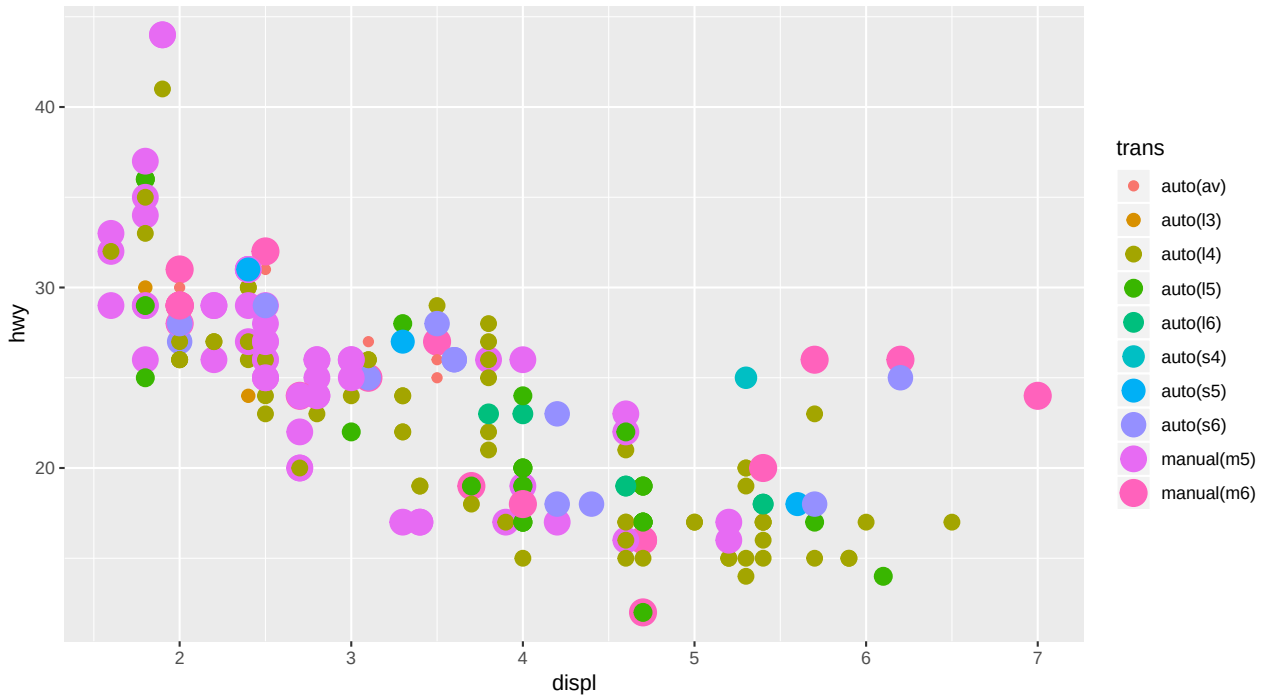
```
# Shape cannot be mapped, the line below throws an error
#ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
#                                               shape = cty))
```

```
# Mapping a continuos variable to size
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              size = cyl))
```

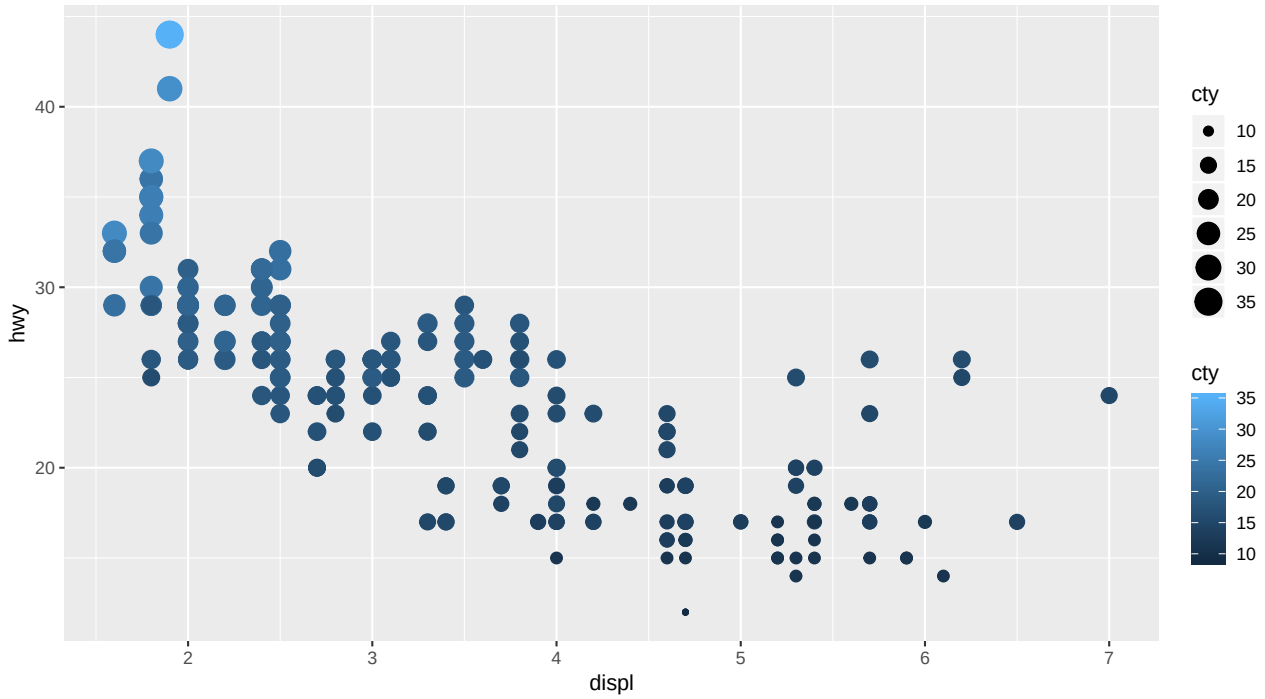


```
# Mapping same variable to multiple aesthetics (Discrete Variable)
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              color = trans, size = trans))
```

```
## Warning: Using size for a discrete variable is not advised.
```



```
# Mapping same variable to multiple aesthetics (Continuos Variable)
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              color = cty, size = cty))
```

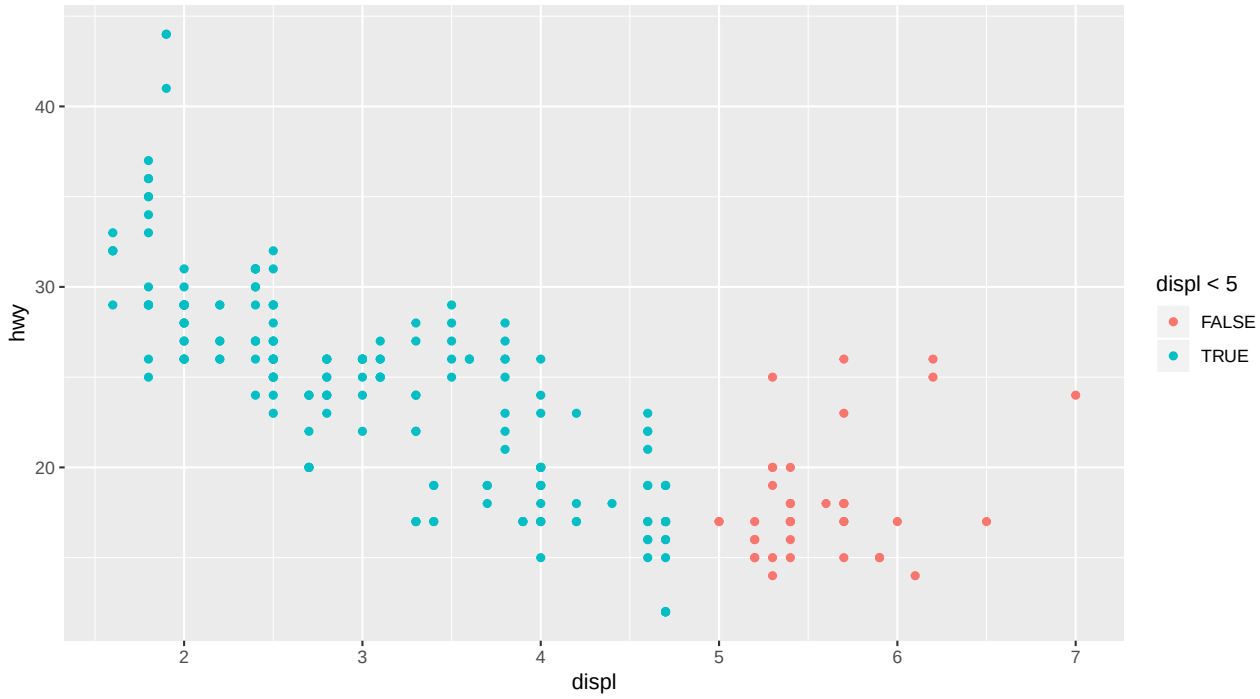


Q. What does the stroke aesthetic do? What shapes does it work with? (Hint: use ?geom_point)

```
?geom_point # stroke aesthetic
```

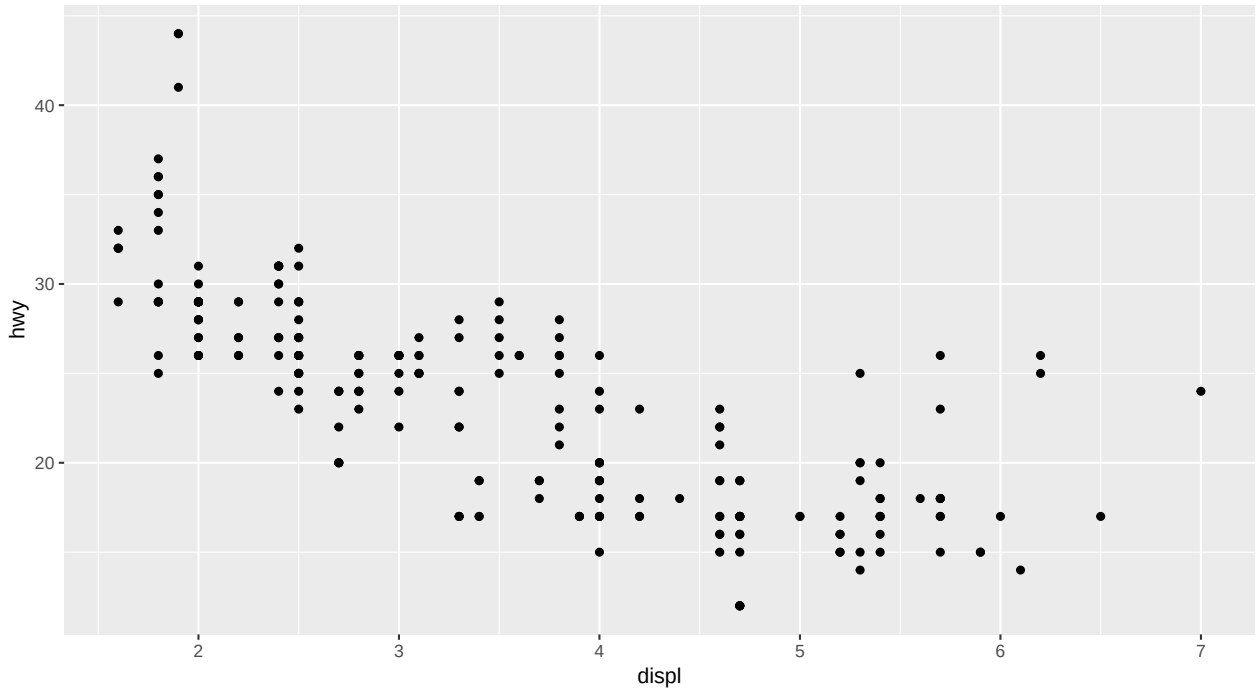
Q. What happens if you map an aesthetic to something other than a variable name, like aes(colour = displ < 5)? Note, you'll also need to specify x and y.

```
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy,
                                              color = displ < 5))
```

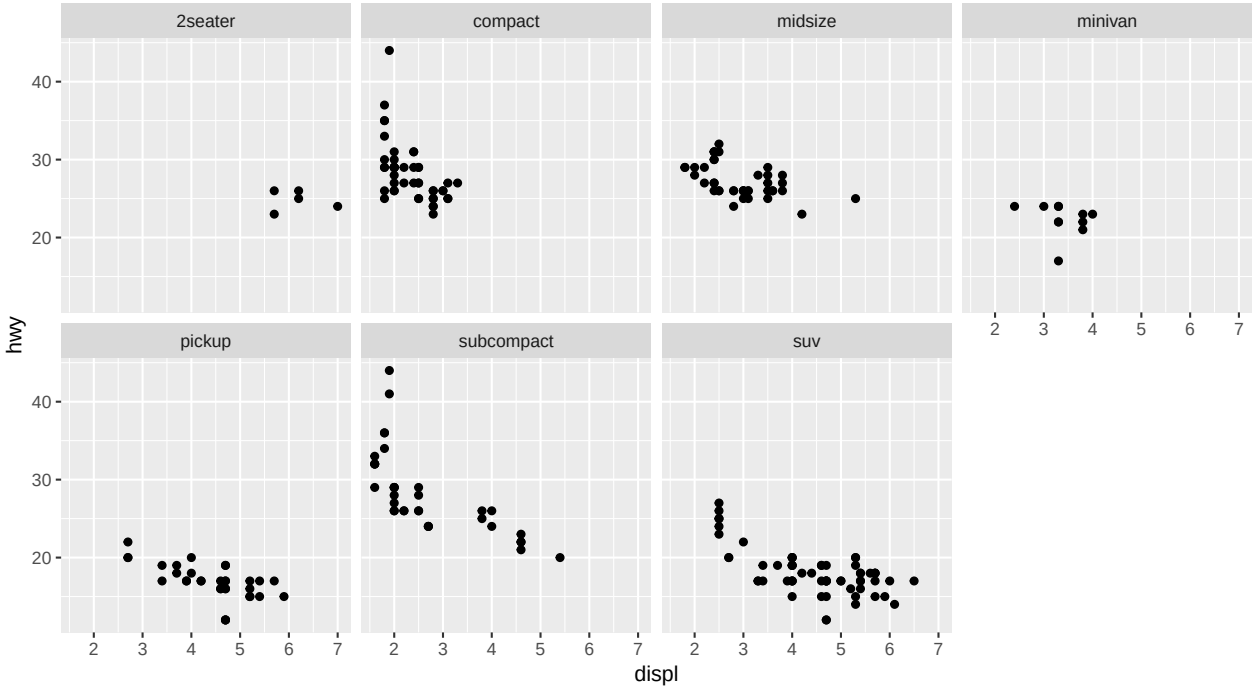


Facets

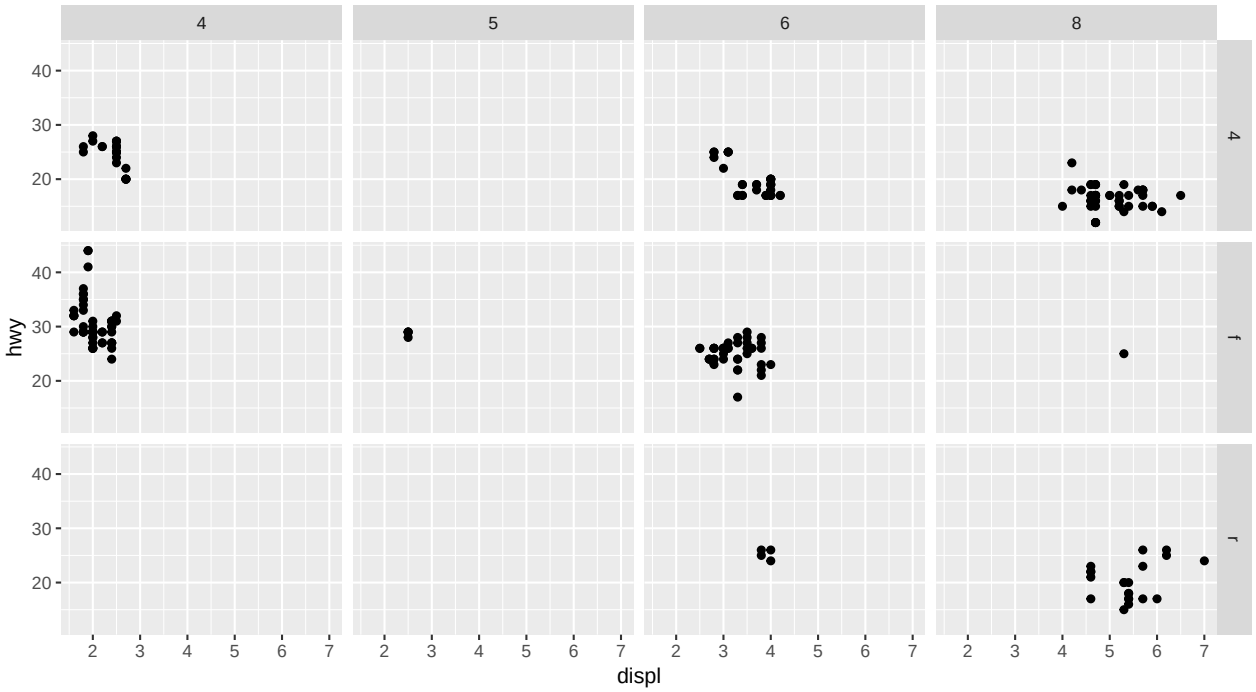
```
# Original Plot
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy))
```



```
# Using facet_wrap()
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_wrap(~ class, nrow = 2)
```

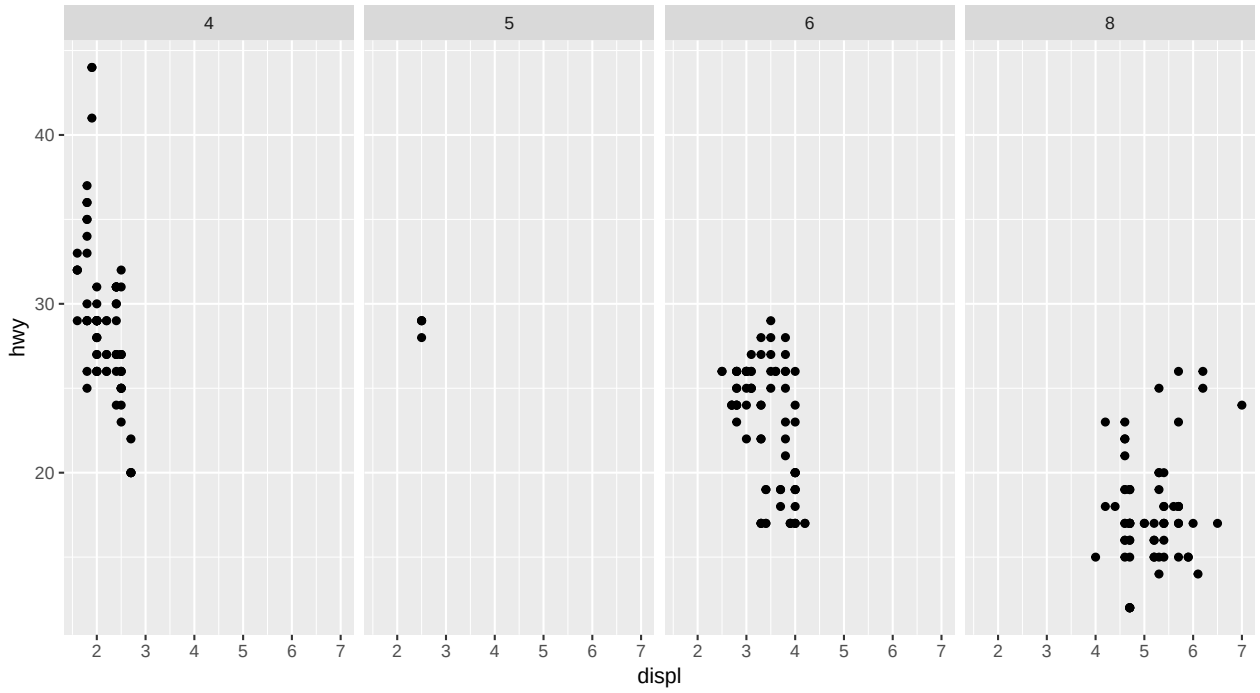


```
# Using facet_grid()
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_grid(drv ~ cyl)
```



```
# Using facet_grid()
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy)) +
```

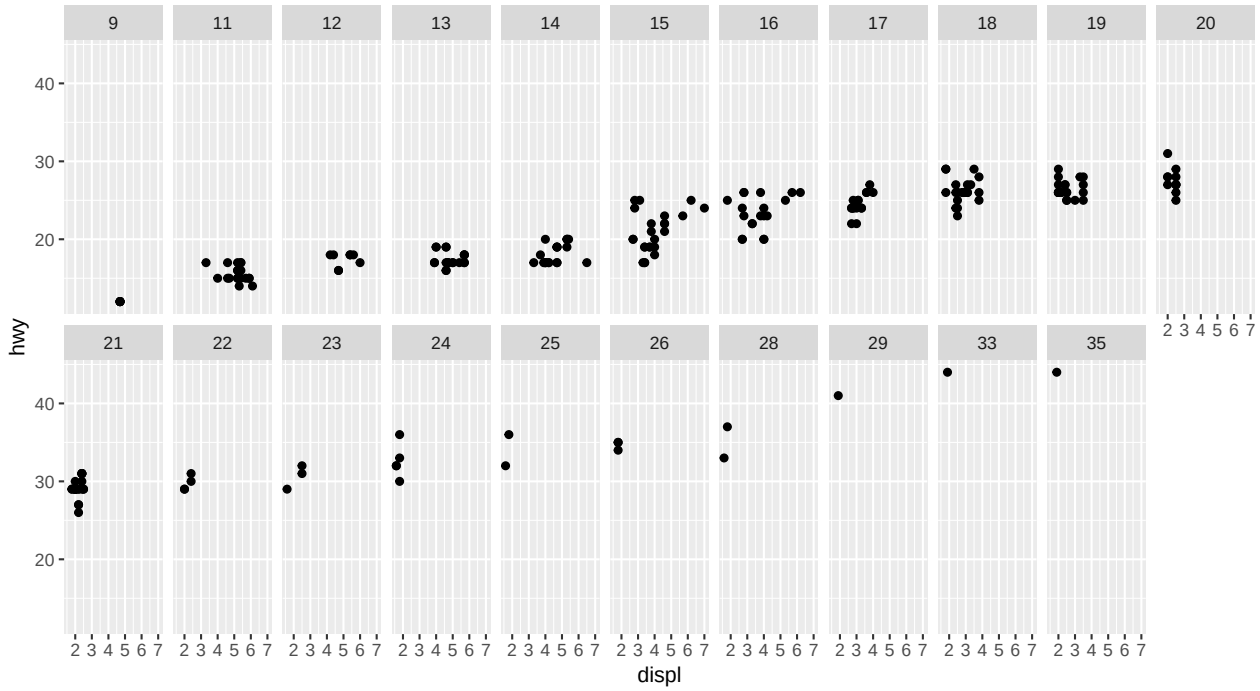
```
  facet_grid(. ~ cyl)
```



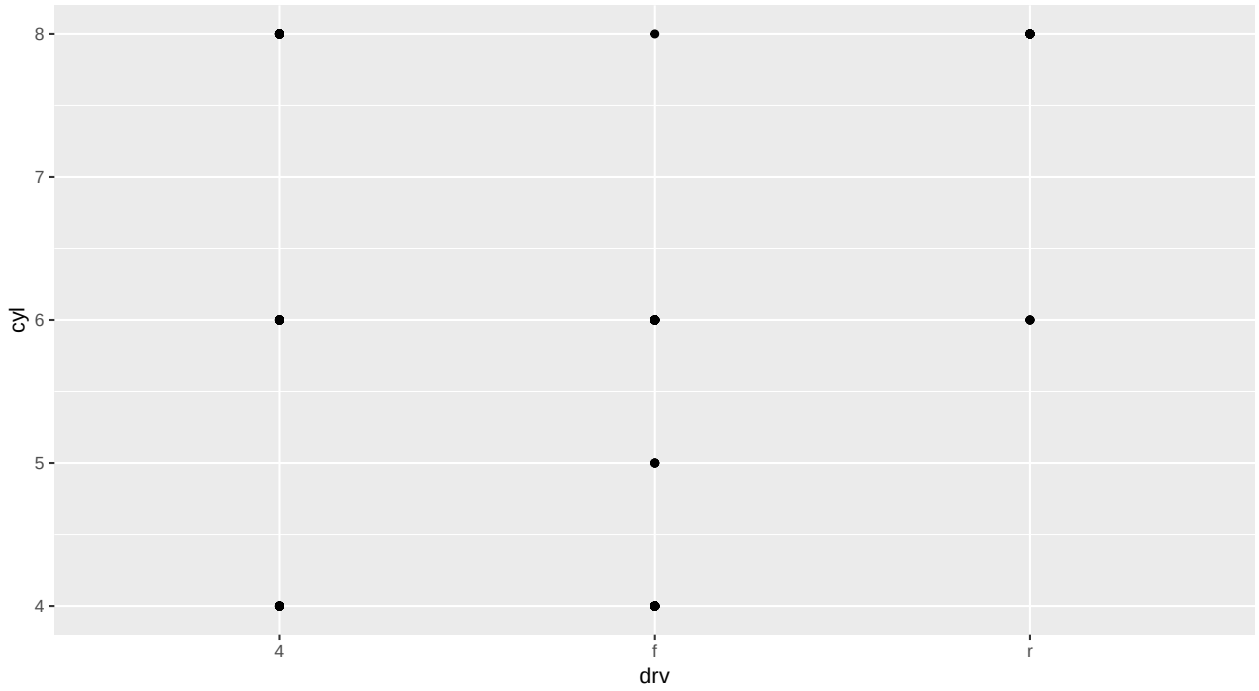
Exercises-3

Q1. What happens if you facet on a continuous variable?

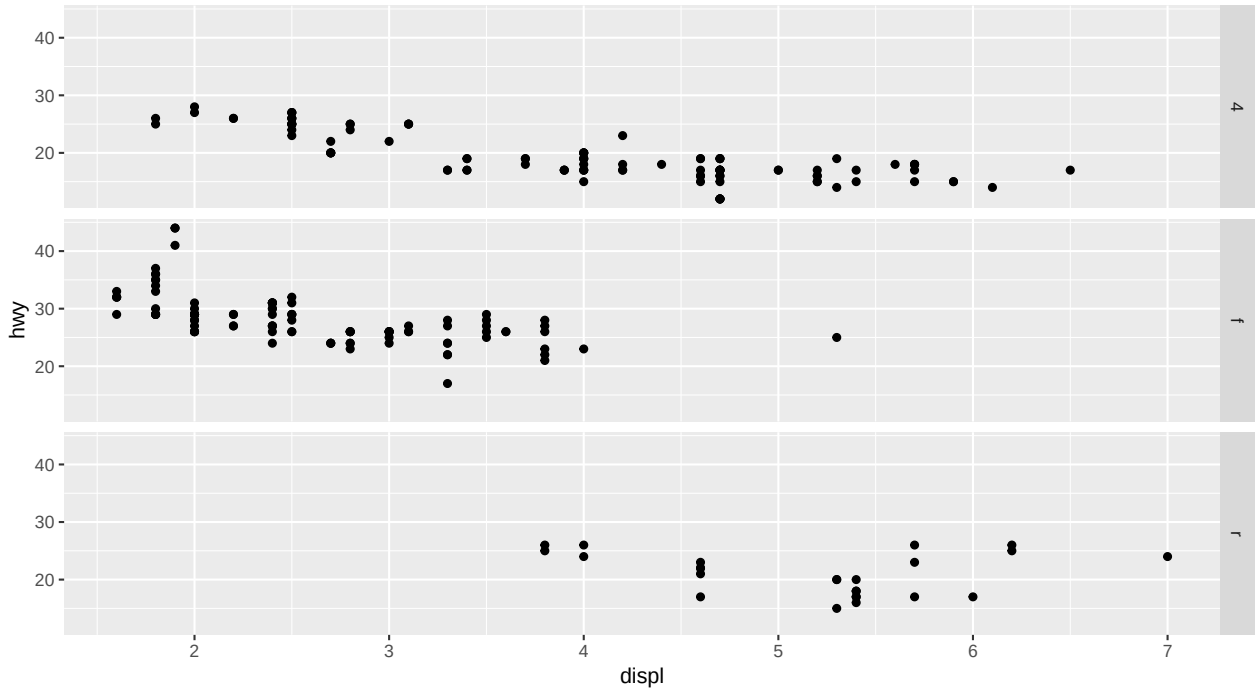
```
ggplot(data = mpg) + geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_wrap(~ cty, nrow = 2)
```



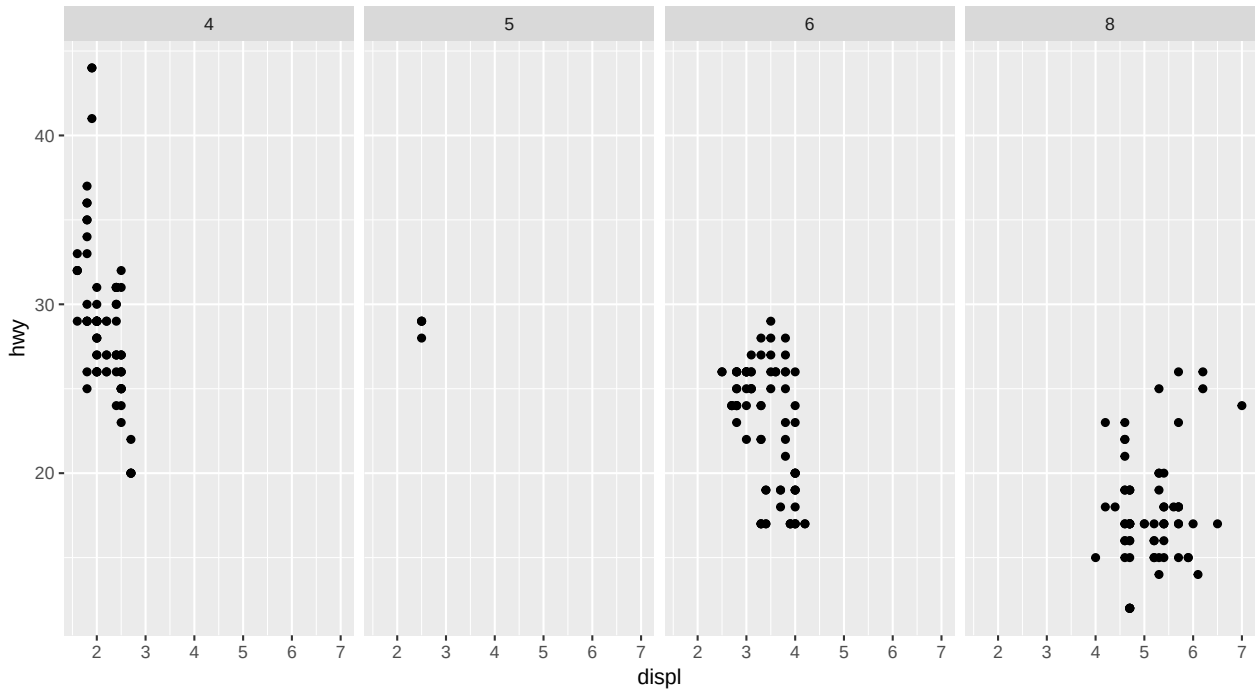
```
ggplot(data = mpg) +
  geom_point(mapping = aes(x = drv, y = cyl))
```



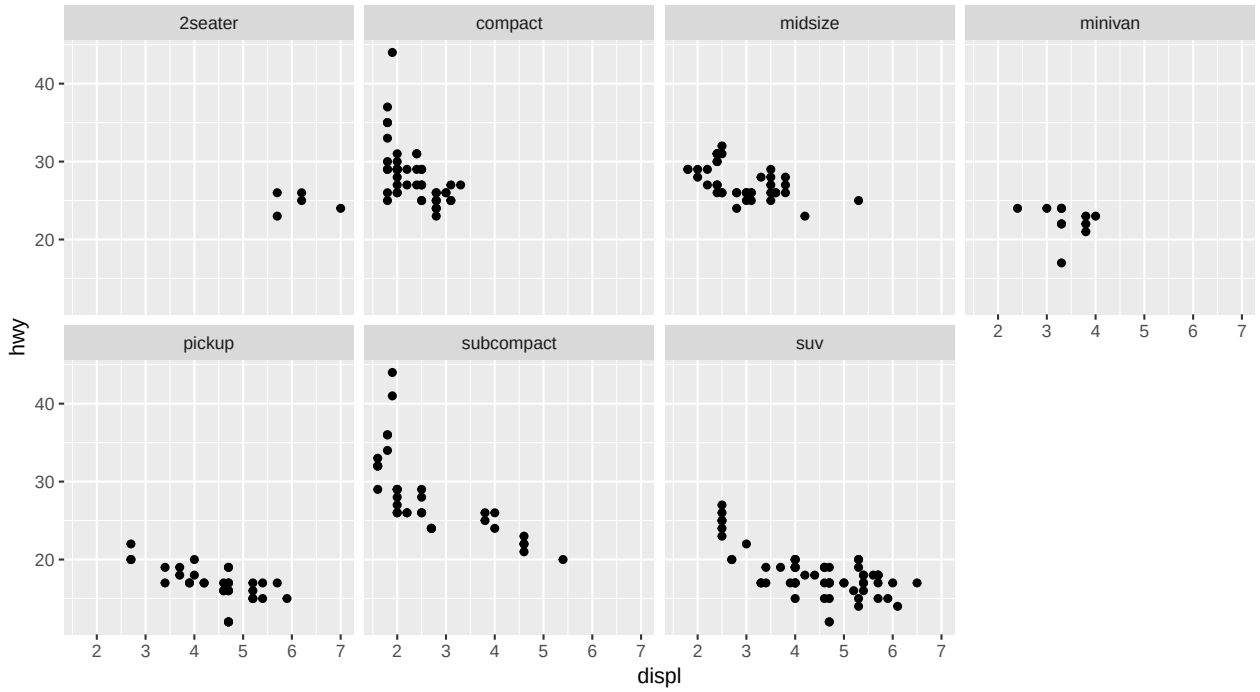
```
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_grid(drv ~ .)
```



```
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_grid(. ~ cyl)
```



```
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy)) +
  facet_wrap(~ class, nrow = 2)
```

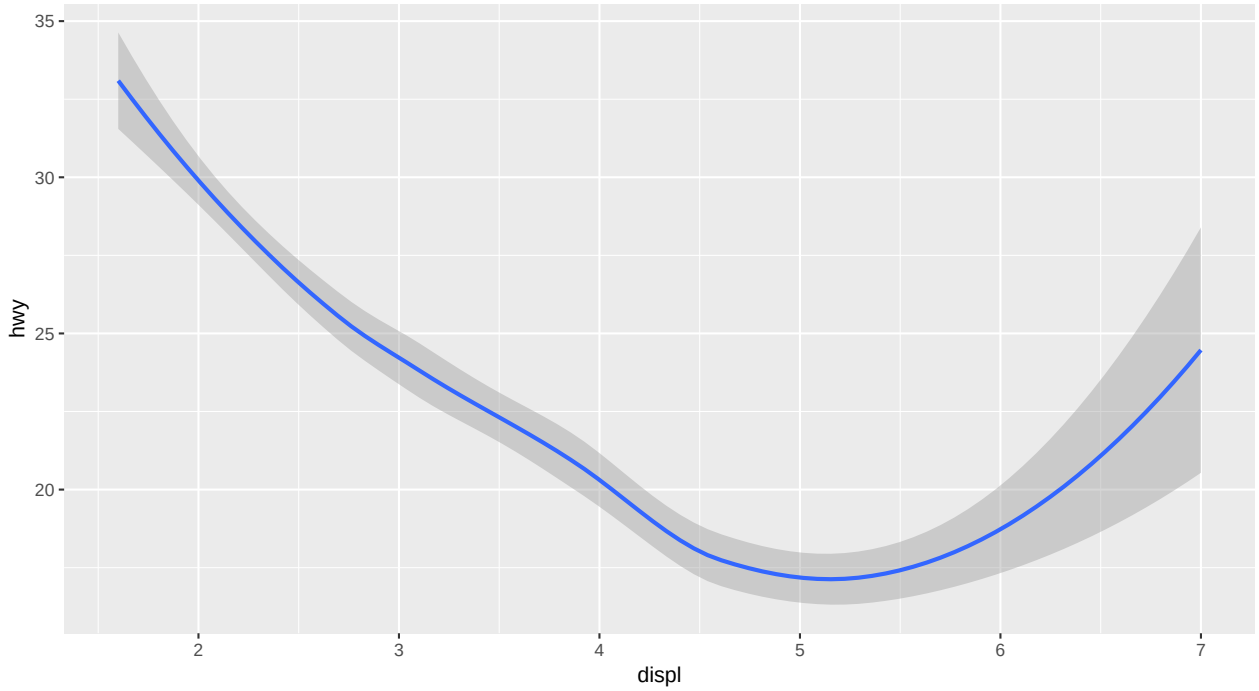


```
?facet_wrap
```

Geometric Objects

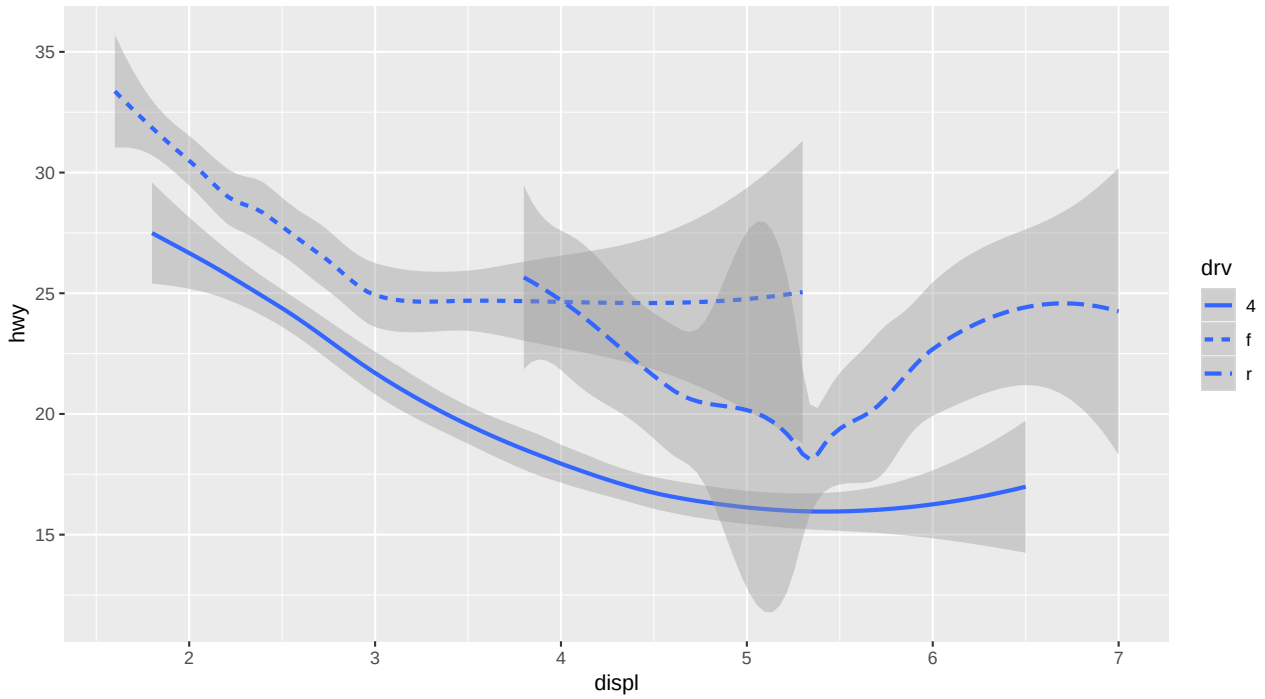
```
# Using geom_smooth()
ggplot(data = mpg) + geom_smooth(mapping =
                                   aes(x = displ, y = hwy))
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



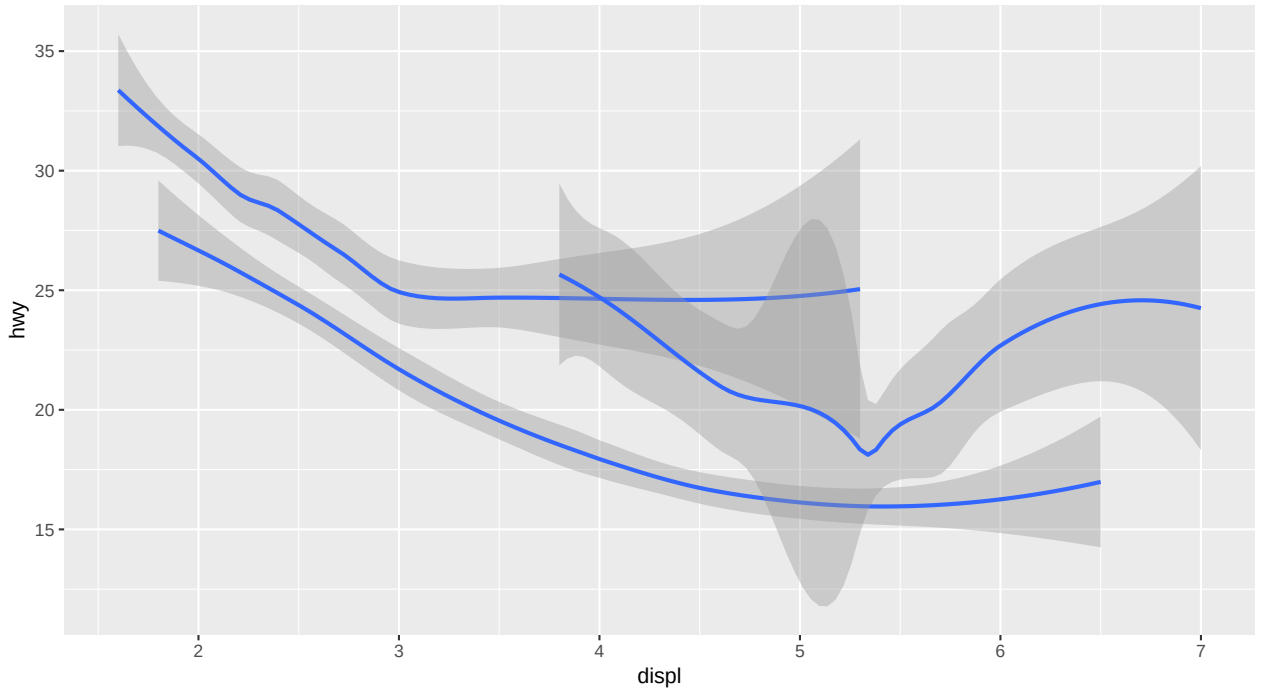
```
# Different linetype aesthetic
ggplot(data = mpg) + geom_smooth(mapping =
                                   aes(x = displ, y = hwy, linetype = drv))
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



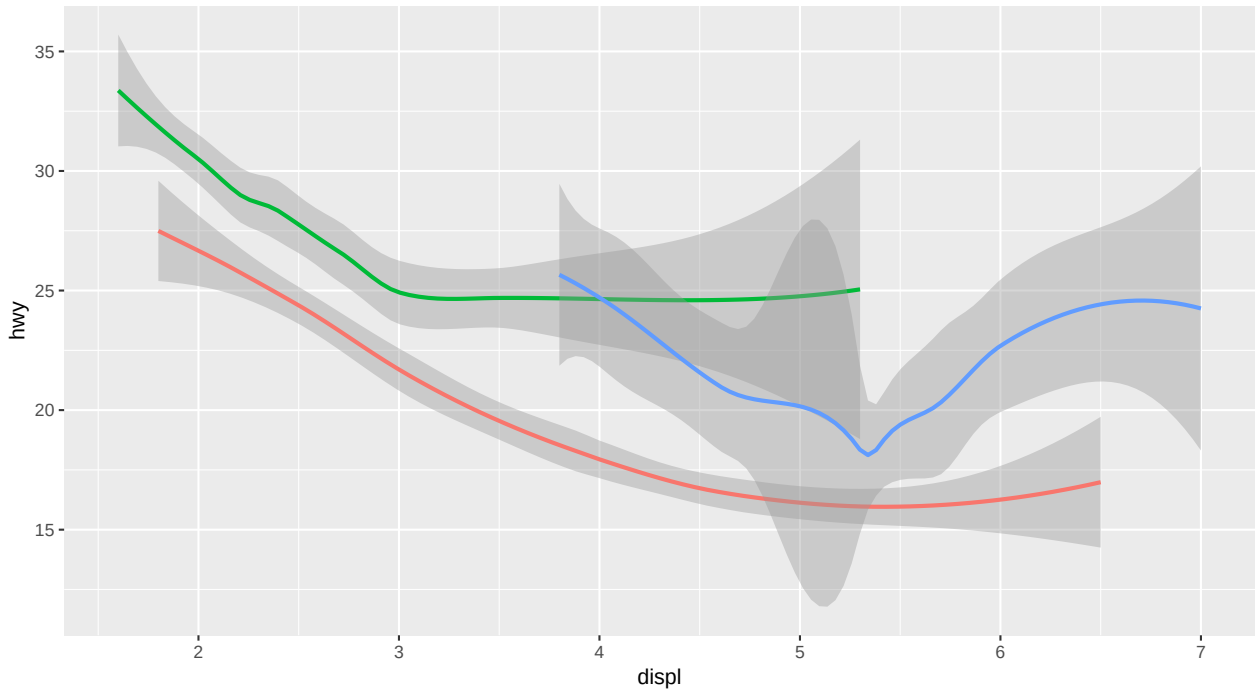
```
ggplot(data = mpg) + geom_smooth(mapping = aes(x = displ, y = hwy, group = drv))
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



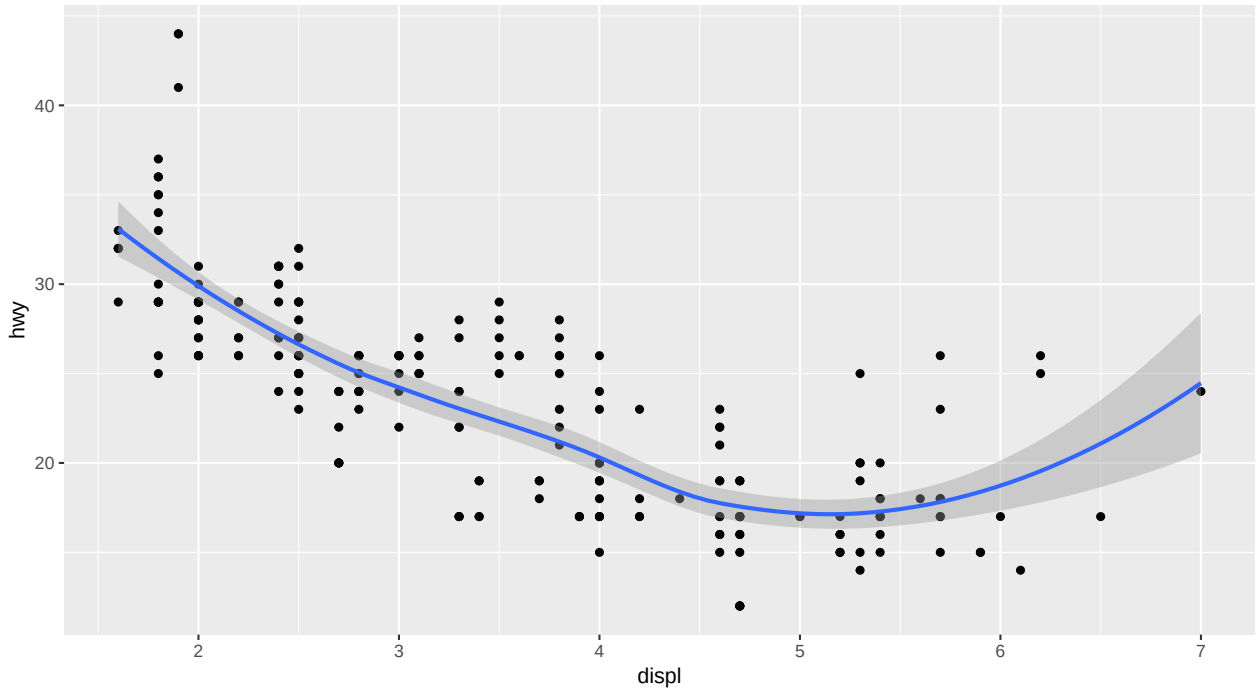
```
# Disabling Legend
ggplot(data = mpg) + geom_smooth(mapping = aes(x = displ,
                                               y = hwy, color = drv),
                                               show.legend = FALSE)
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



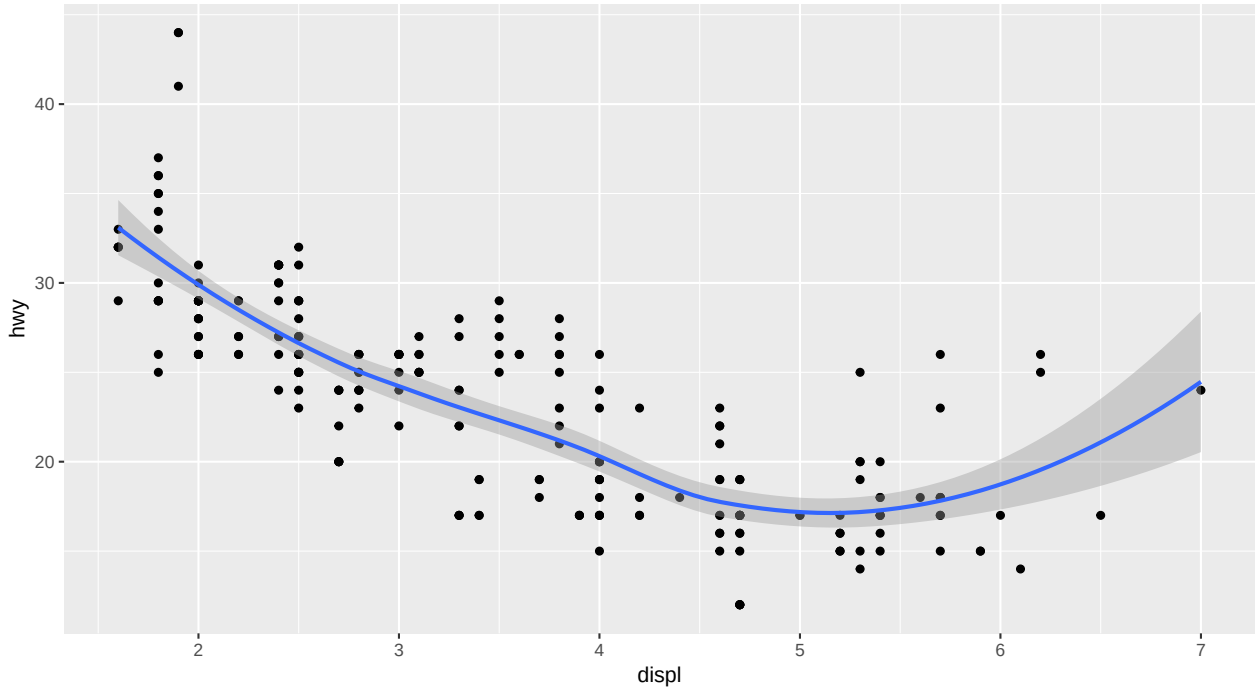
```
# Multiple geoms in a Plot
ggplot(data = mpg) +
  geom_point(mapping = aes(x = displ, y = hwy)) +
  geom_smooth(mapping = aes(x = displ, y = hwy))
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



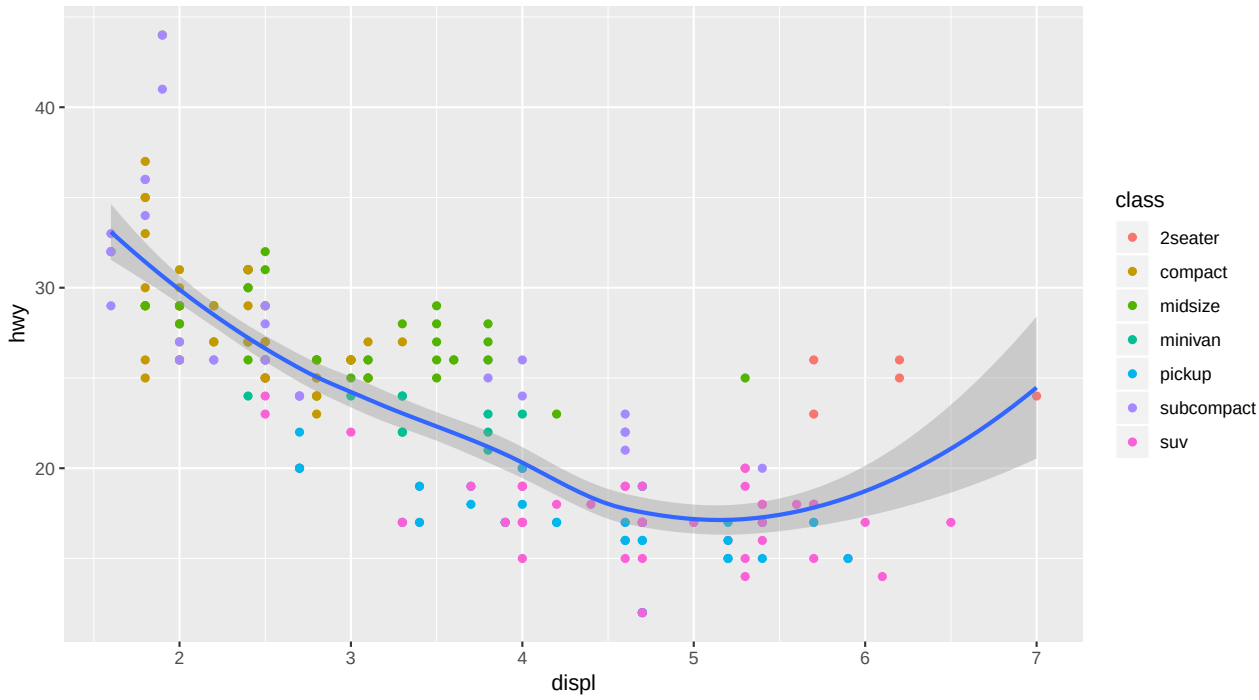
```
# Global Mappings
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +
  geom_point() + geom_smooth()
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



```
# Local Mappings
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +
  geom_point(mapping = aes(color = class)) +
  geom_smooth()
```

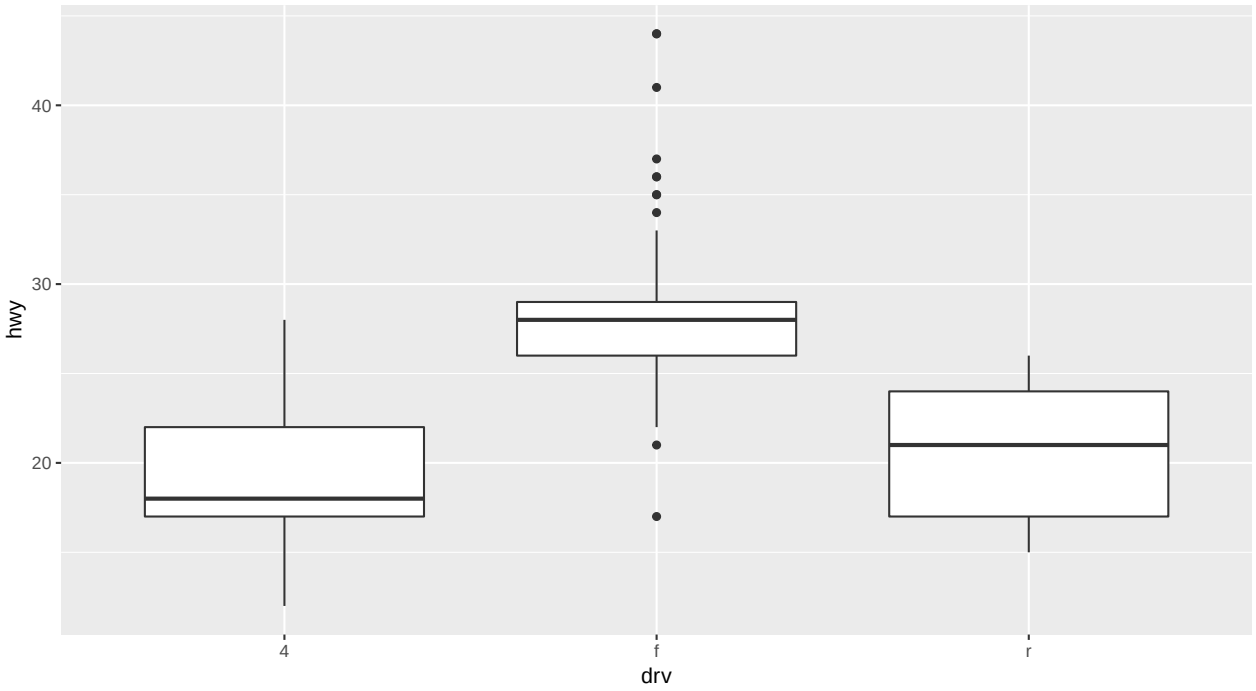
```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



Exercises-4

Q1. What geom would you use to draw a line chart? A boxplot? A histogram? An area chart? Ans. geom_boxplot(), geom_histogram()

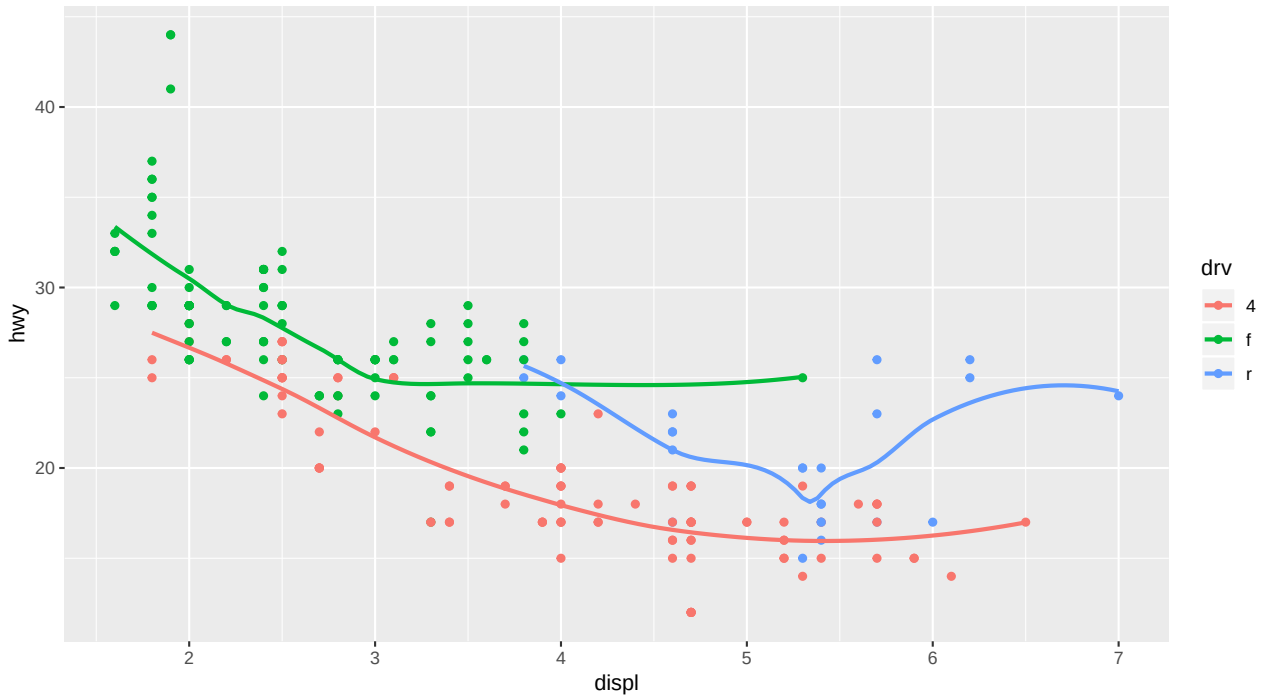
```
ggplot(data = mpg, mapping = aes(x = drv, y = hwy)) + geom_boxplot()
```



Q2. Recreate the plots

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy, color = drv)) +
  geom_point() +
  geom_smooth(se = FALSE)
```

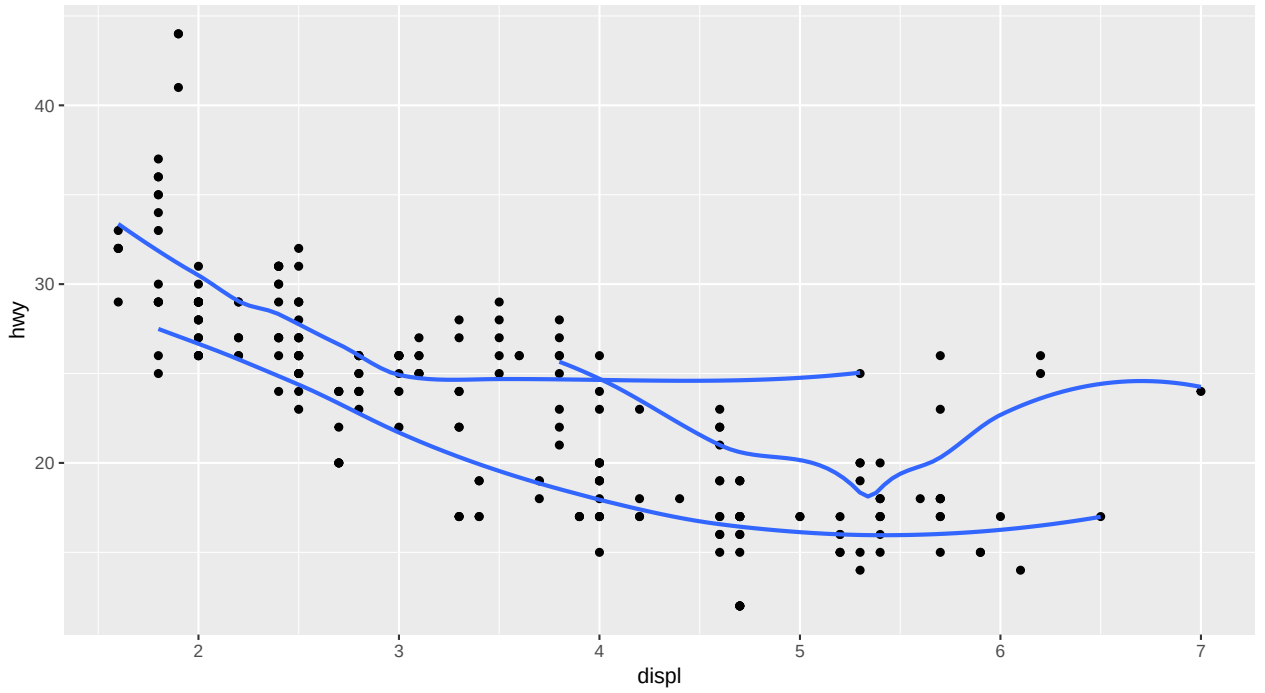
```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



Q3. Recreate the plots

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +
        geom_point() +
        geom_smooth(mapping = aes(group = drv), se = FALSE)
```

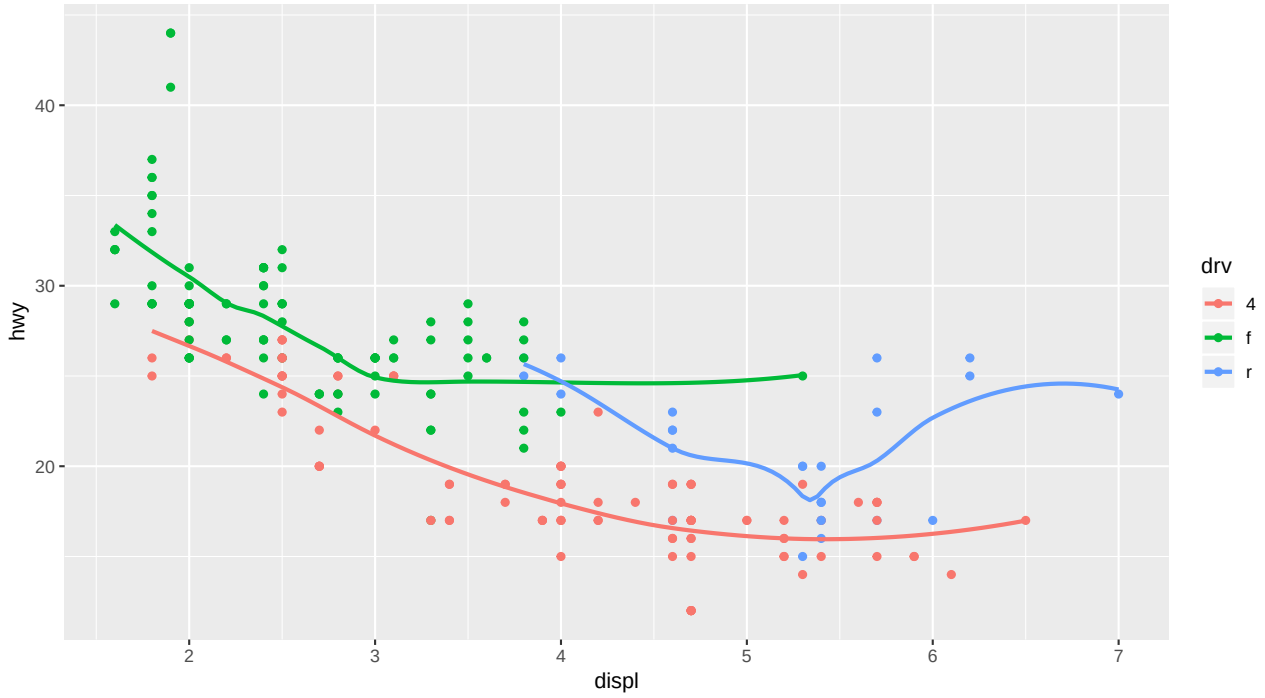
```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy, color = drv)) +
        geom_point() +
```

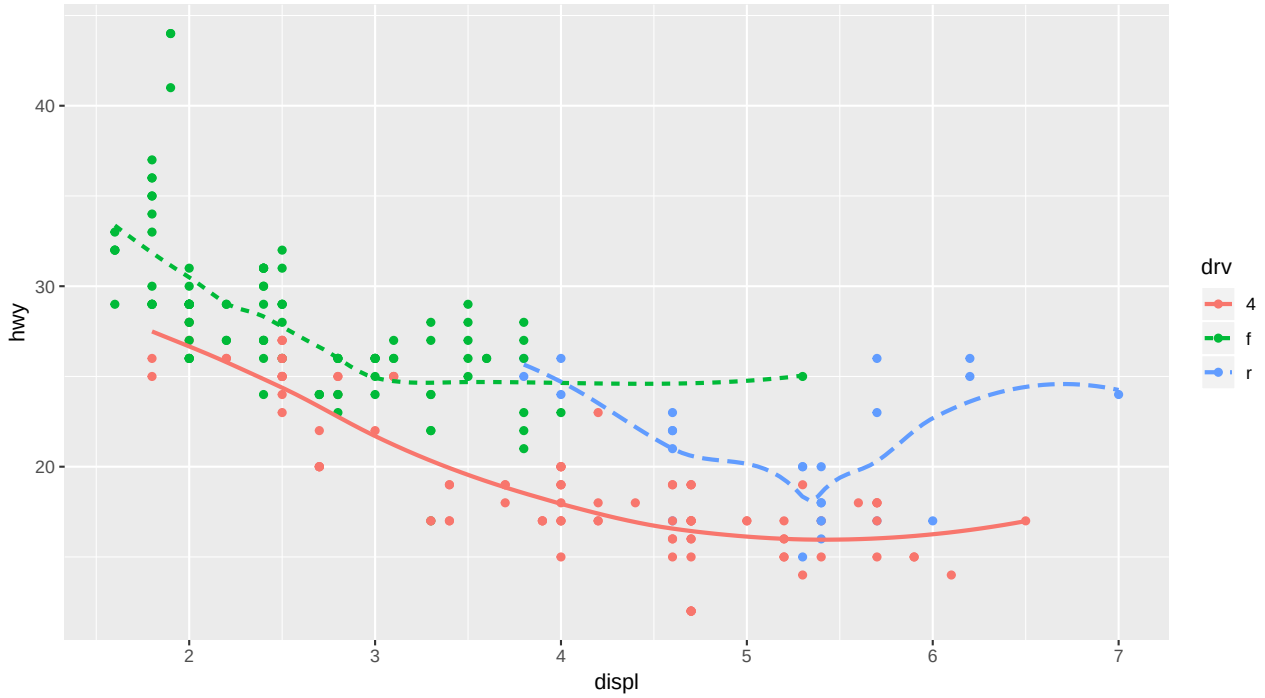
```
        geom_smooth(mapping = aes(group = drv), se = FALSE)
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



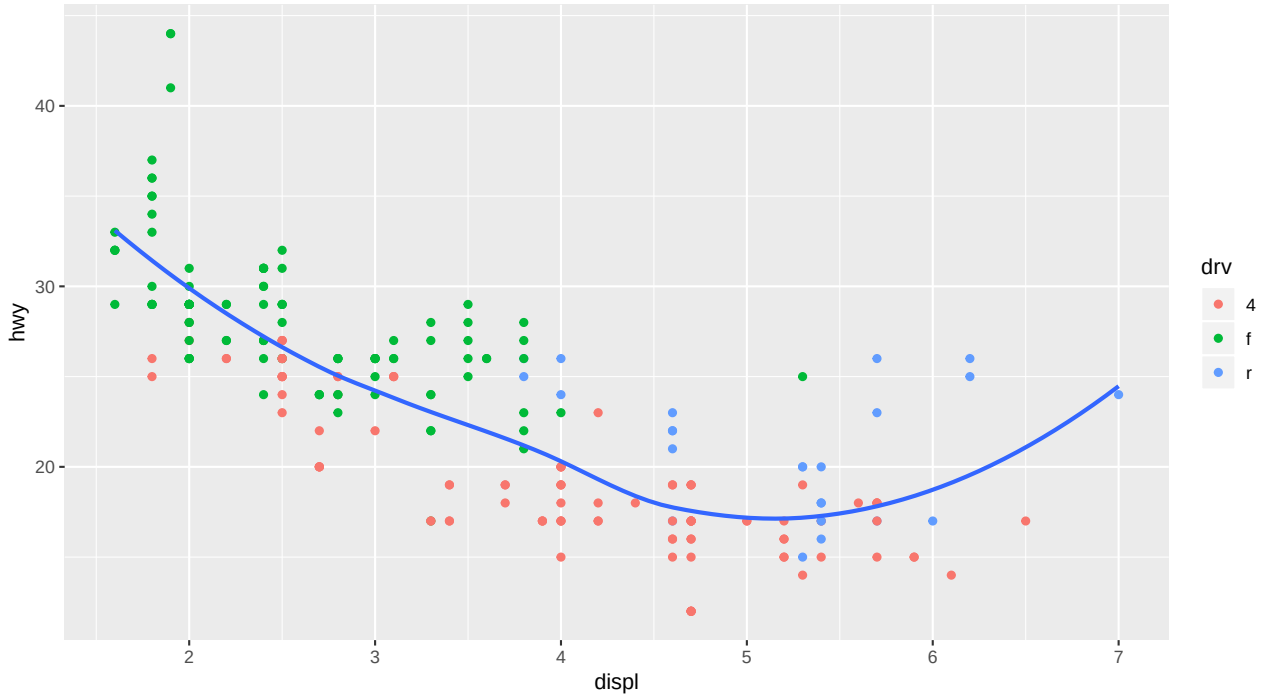
```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy, color = drv)) +
        geom_point() +
        geom_smooth(mapping = aes(group = drv, linetype = drv), se = FALSE)
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```

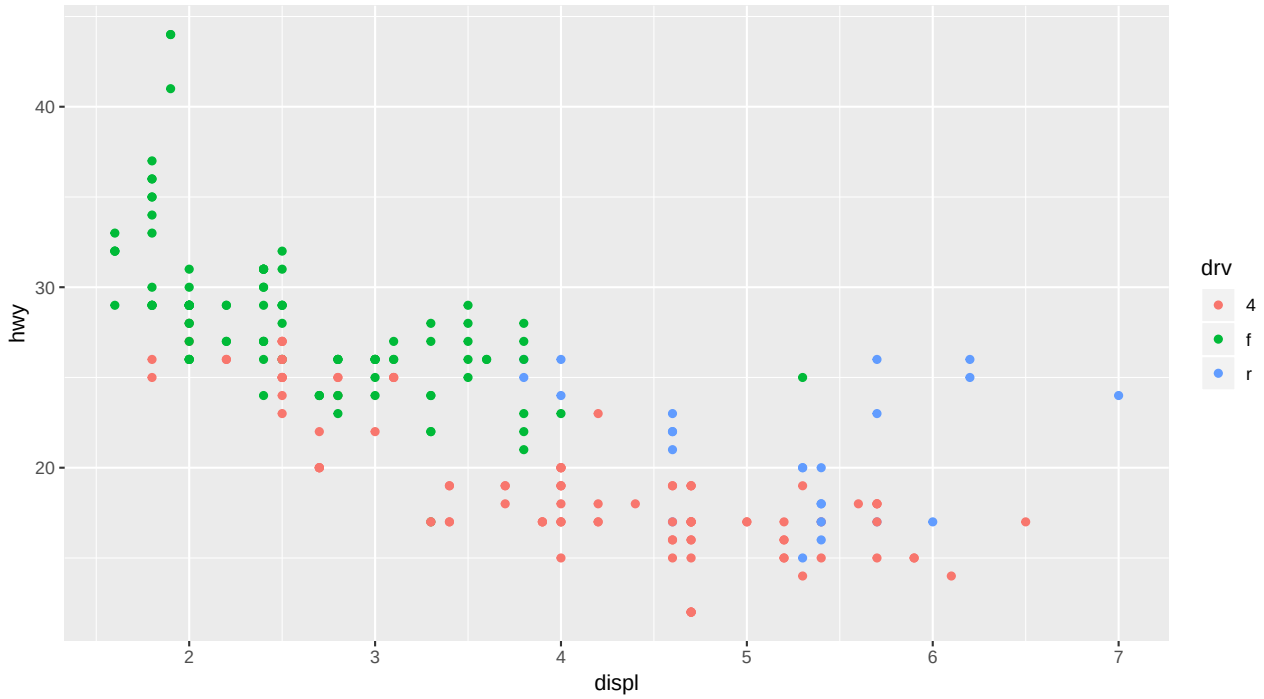


```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +
        geom_point(mapping = aes(color = drv)) +
        geom_smooth(se = FALSE)
```

```
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```



```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +
        geom_point(mapping = aes(color = drv))
```

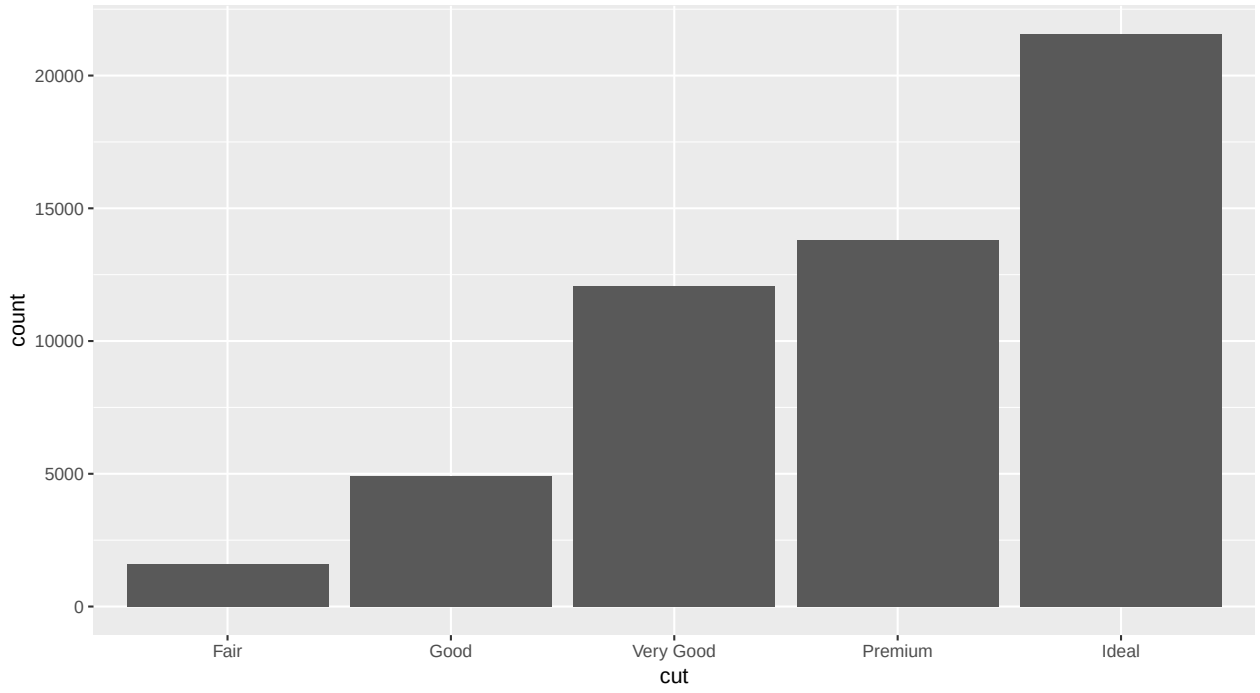


Statistical transformations

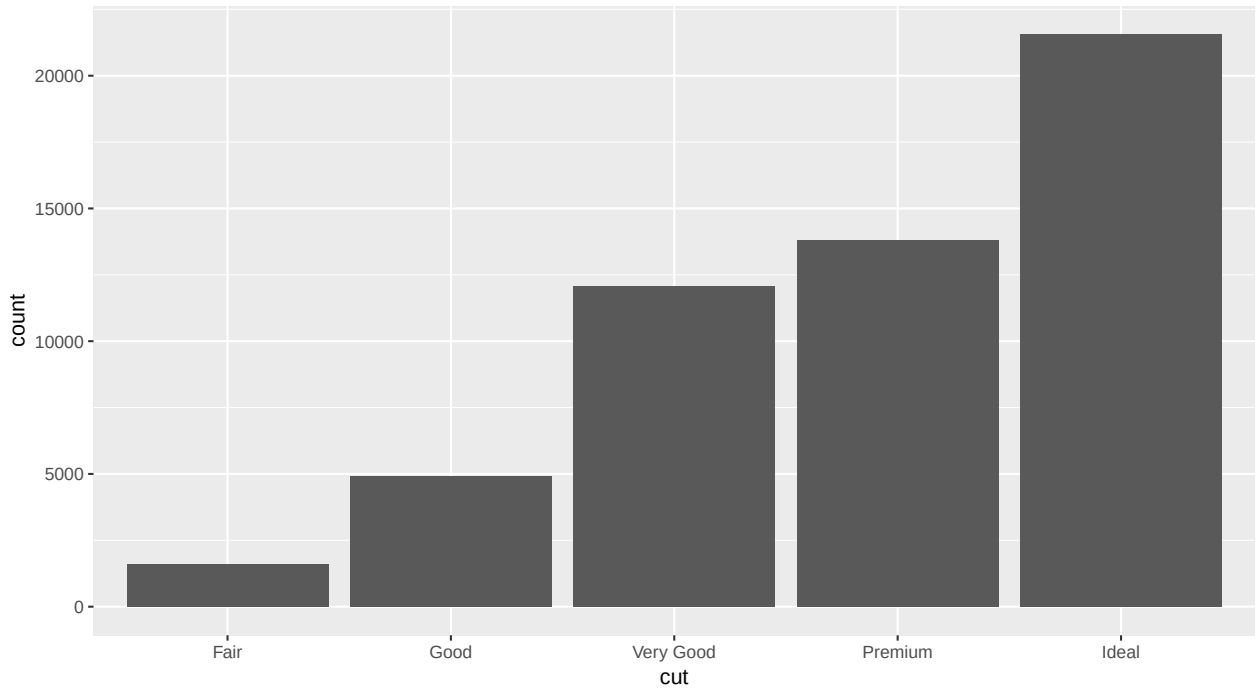
```
# Bar Charts
# Using the diamonds dataset
attach(diamonds)
nrow(diamonds)
```

```
## [1] 53940
```

```
ggplot(data = diamonds) +
  geom_bar(mapping = aes(x = cut))
```

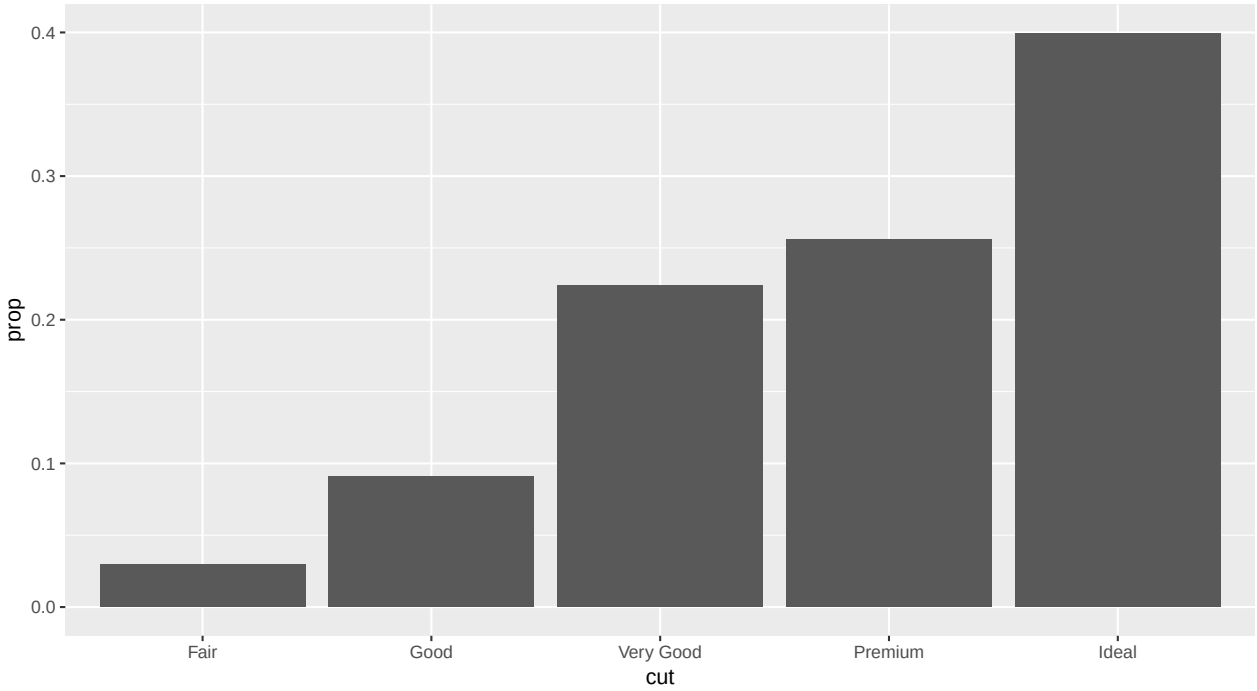


```
# Using stat_count() instead of geom_bar()
ggplot(data = diamonds) +
  stat_count(mapping = aes(x = cut))
```



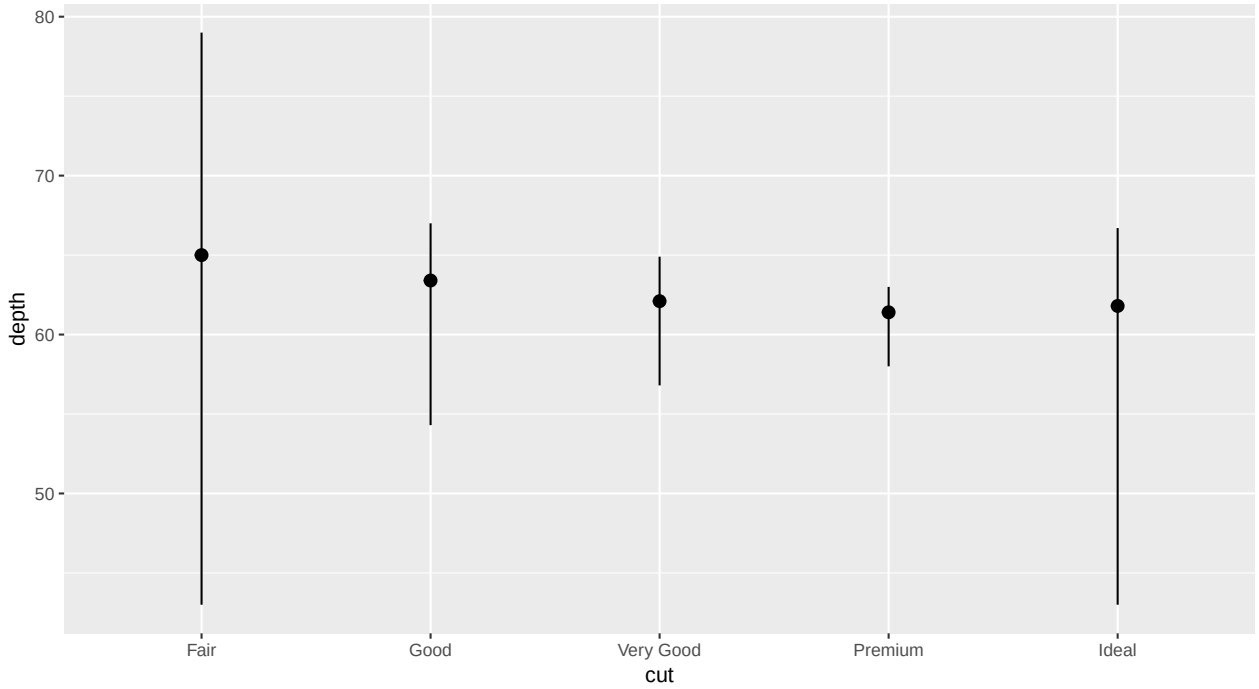
Every geom function has a stat equivalent and vice-versa that could be used to produce the same plot in two different ways.

```
# Displaying Proportion instead of frequency
ggplot(data = diamonds) +
  geom_bar(mapping = aes(x = cut, y = ..prop.., group = 1))
```



```
ggplot(data = diamonds) +
  stat_summary(
    mapping = aes(x = cut, y = depth),
    fun.ymin = min,
```

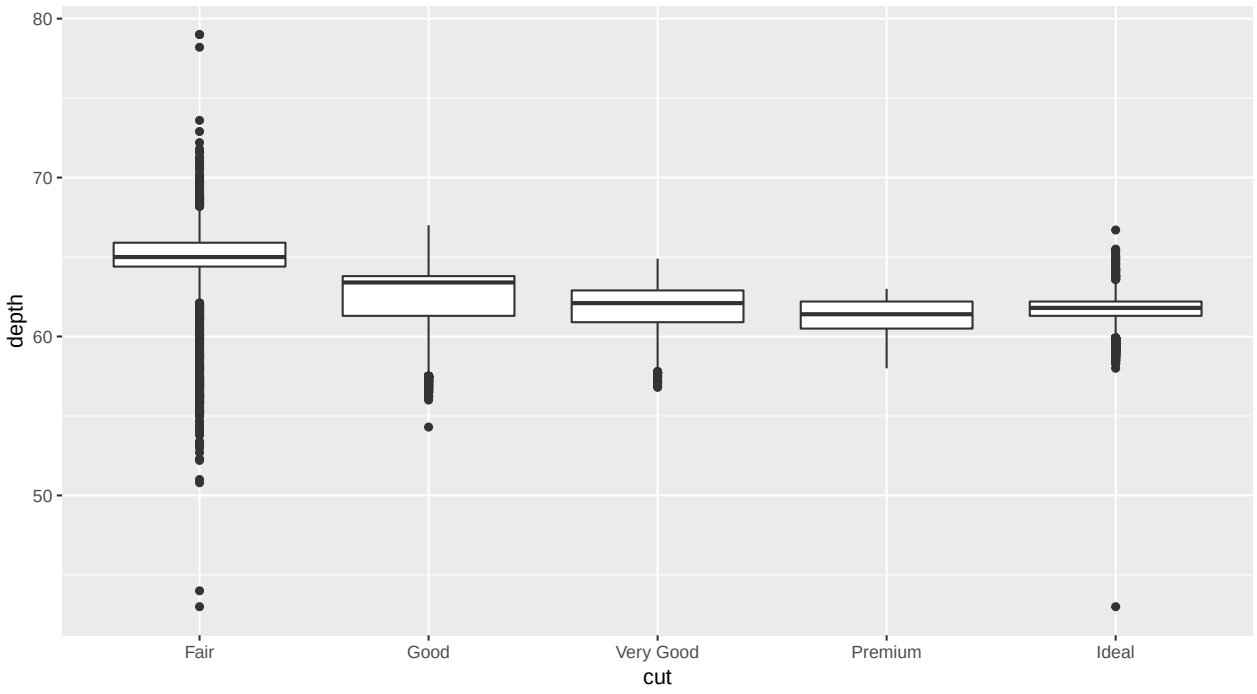
```
    fun.ymax = max,
    fun.y = median
)
```



Exercises-5

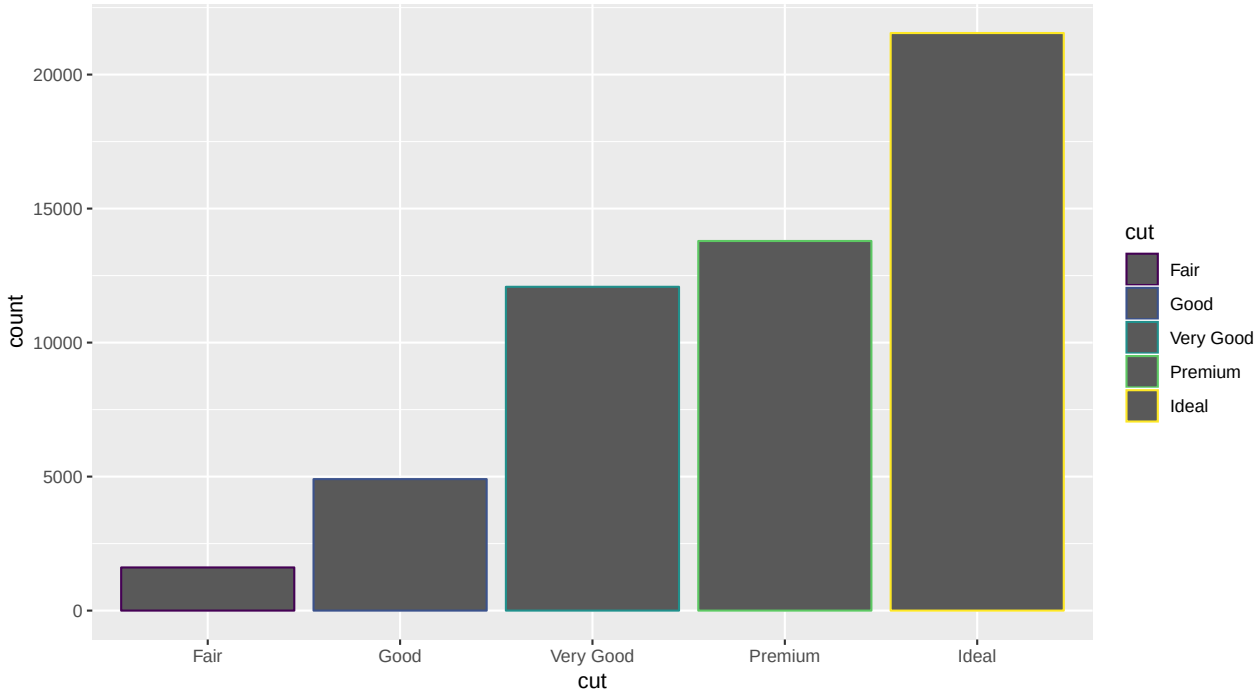
Q1. What is the default geom associated with stat_summary()? How could you rewrite the previous plot to use that geom function instead of the stat function?

```
ggplot(data = diamonds) + geom_boxplot(mapping = aes(x = cut, y = depth))
```



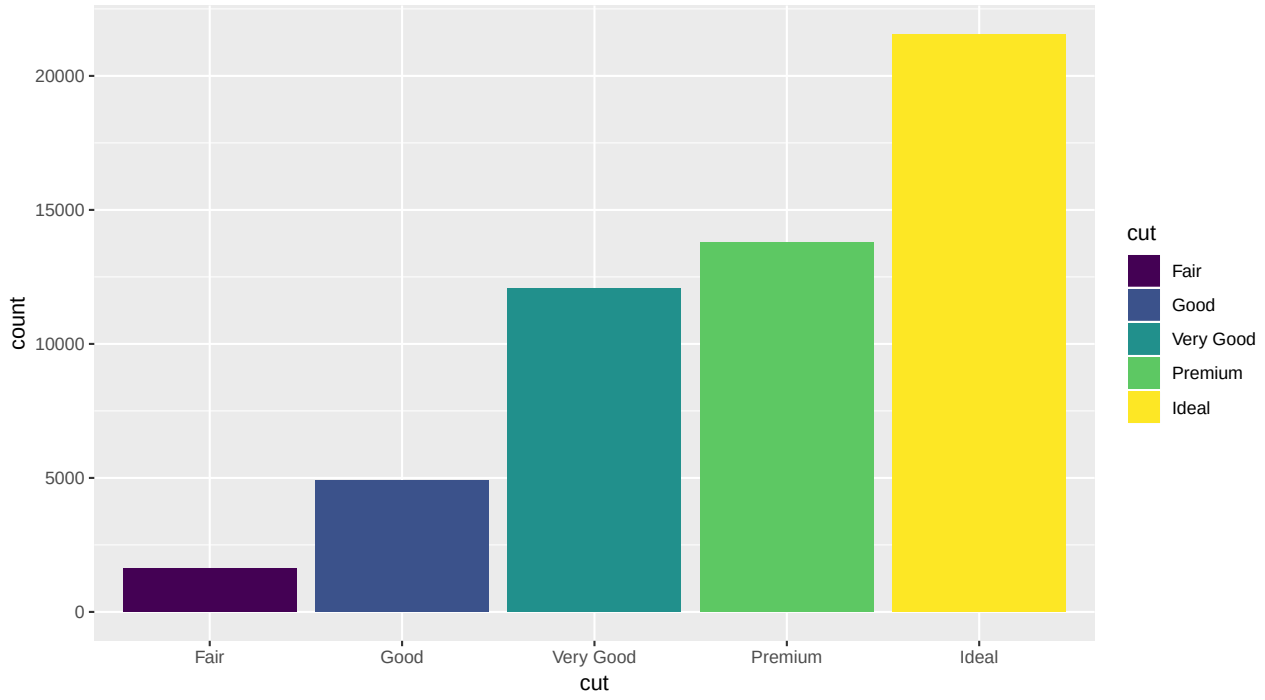
Position Adjustments

```
# Using Colour aesthetic
ggplot(data = diamonds) +
  geom_bar(mapping = aes(x = cut, colour = cut))
```

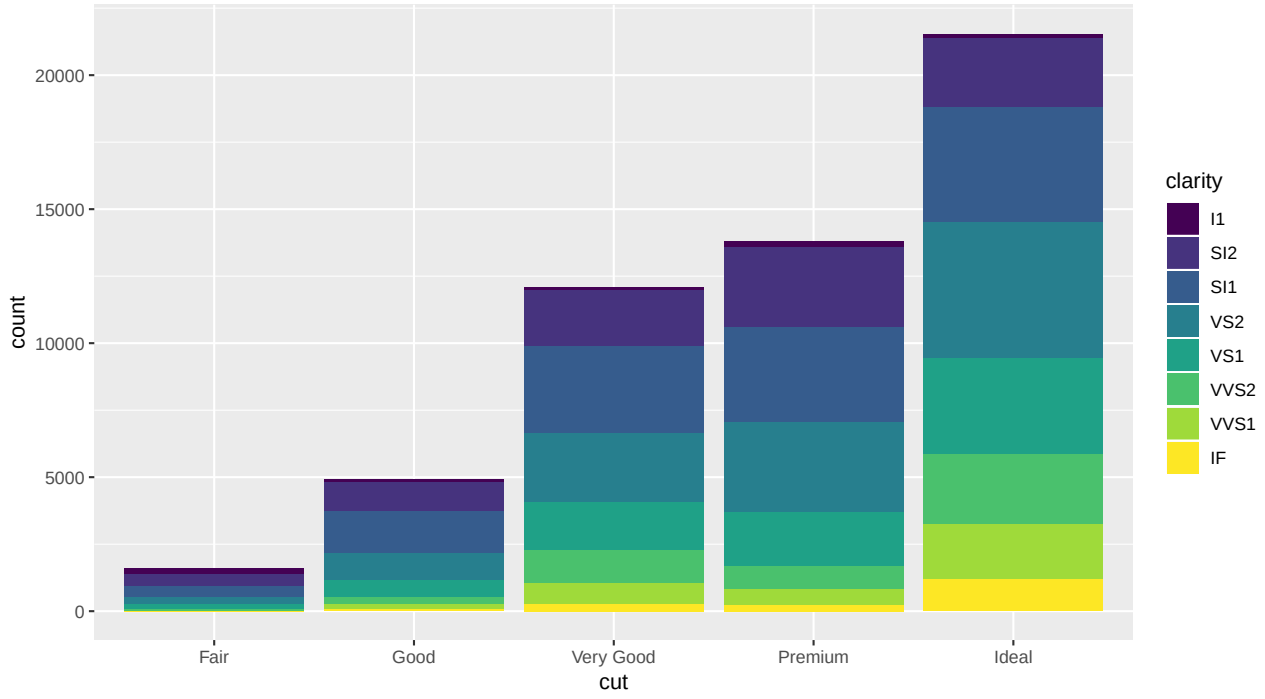


```
# Using fill aesthetic
ggplot(data = diamonds) +
```

```
  geom_bar(mapping = aes(x = cut, fill = cut))
```



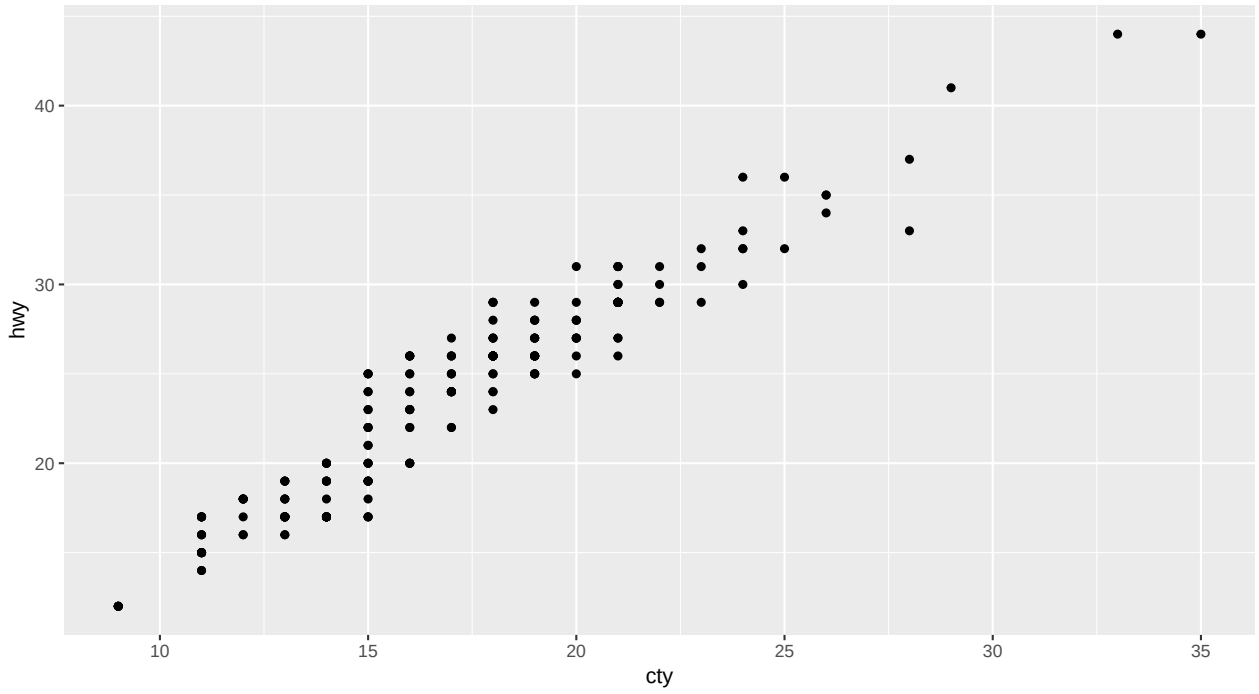
```
# Stacked Bar Chart
ggplot(data = diamonds) +
  geom_bar(mapping = aes(x = cut, fill = clarity))
```



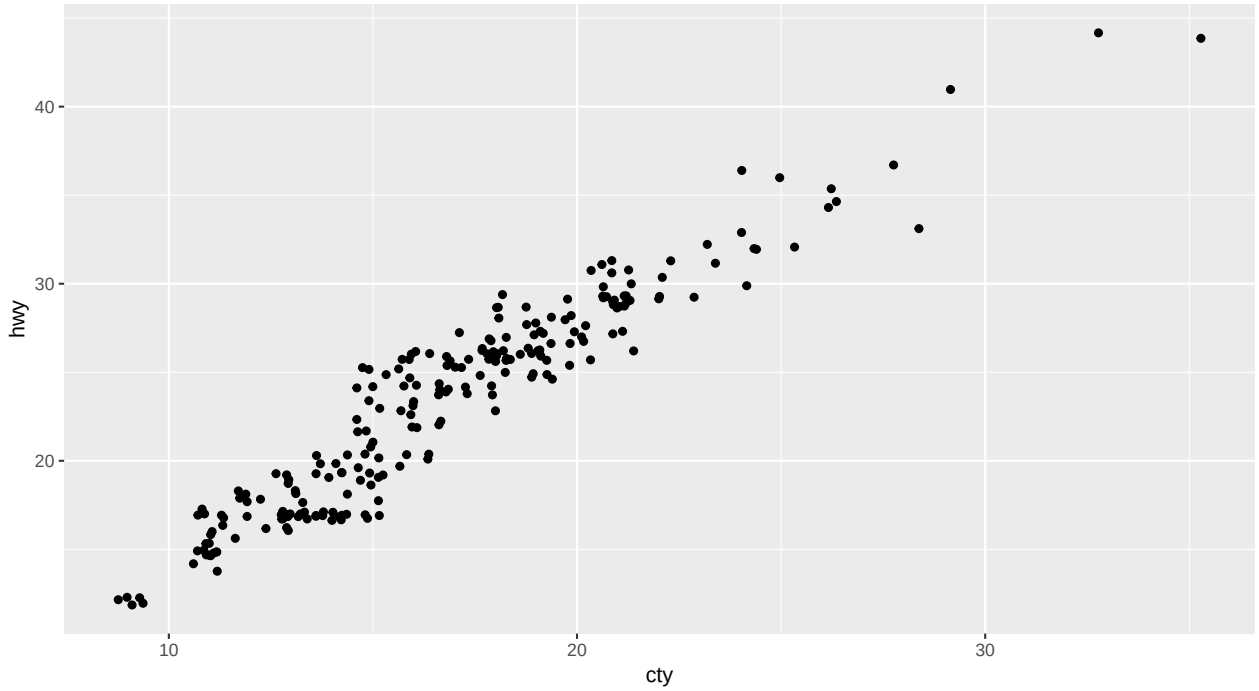
Exercises-6

Q.What is the problem with this plot? How could you improve it?

```r
# Original Plot
ggplot(data = mpg, mapping = aes(x = cty, y = hwy)) +
  geom_point()
```



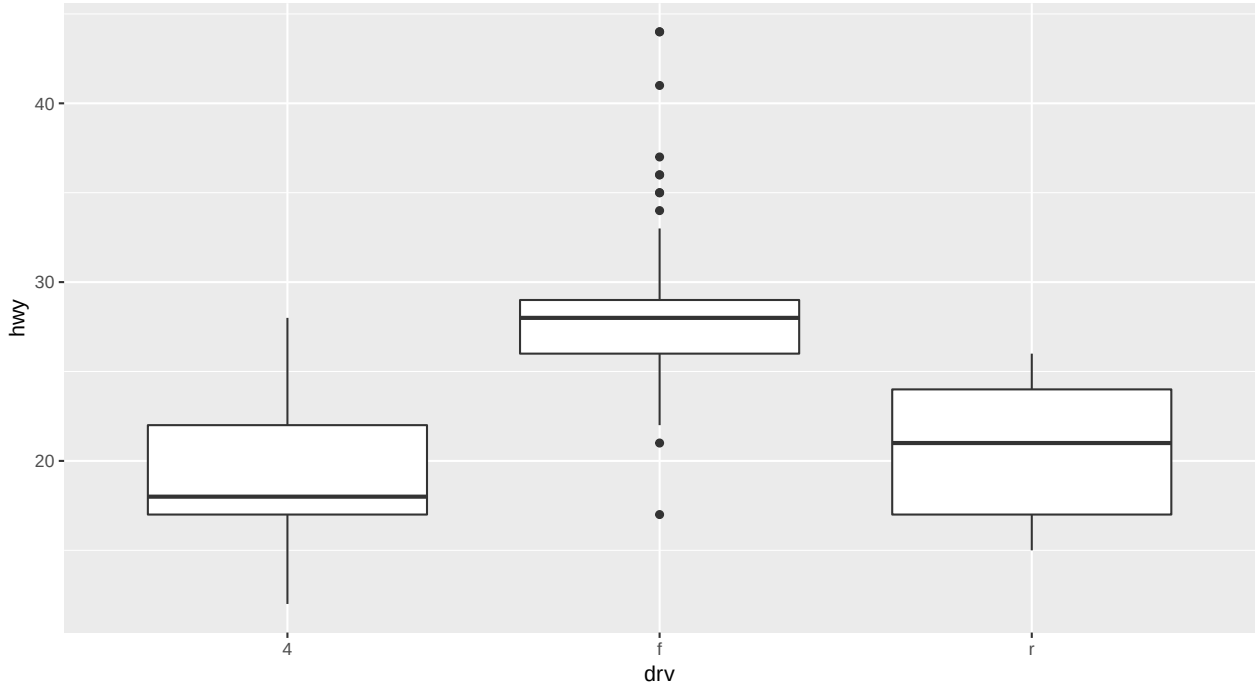
```r
# Adding jitter
ggplot(data = mpg, mapping = aes(x = cty, y = hwy)) +
  geom_point(position = "jitter")
```



The above plot can also be plotted using the geom_jitter function. This jitter avoids overplotting and adds a small amount on random noise to each point.

Q. What's the default position adjustment for geom_boxplot()? Create a visualisation of the mpg dataset that demonstrates it.

```
ggplot(data = mpg, mapping = aes(x = drv, y = hwy)) + geom_boxplot()
```



```
# Grammar of Graphics Template
ggplot(data = <DATA>) +
  <GEOM_FUNCTION>(
     mapping = aes(<MAPPINGS>),
     stat = <STAT>,
     position = <POSITION>
  ) +
  <COORDINATE_FUNCTION> +
  <FACET_FUNCTION>
```
